On autopsy, external examination showed anasarca and increased abdominal volume. The internal organs showed diffuse edema, including the brain, with pleural, pericardial, and peritoneal cavity effusion. The heart exhibited a granular, opaque, whitish external surface, akin to fibrin deposits on the pericardium (Figure 1).

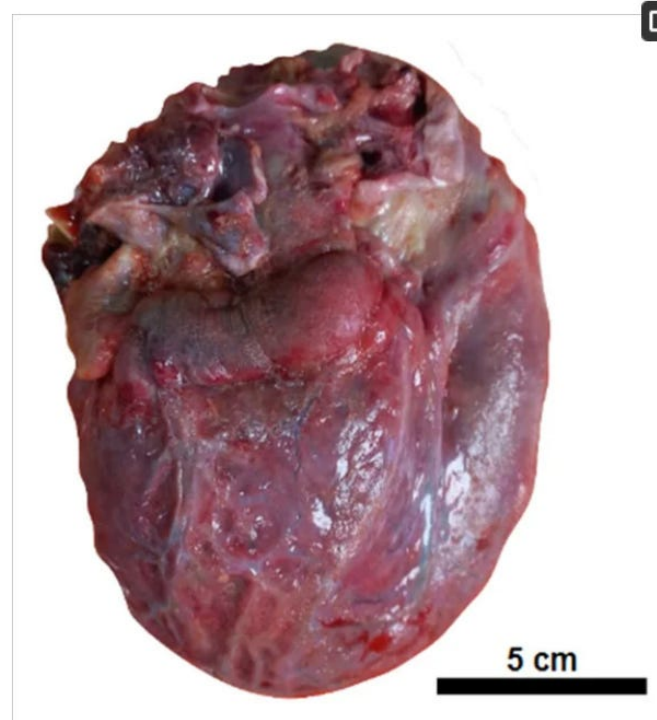

Figure 1. Pericarditis. Globose heart with an opaque external surface covered in fine granulation and fibrinous debris.

The myocardium had a soft consistency, alternating between pale and hemorrhagic areas, while the valves remained preserved. [Microscopy revealed disseminated vascular thromboembolism](#). The macroscopic and microscopic findings of the main organs are reported below (Table 2, Figure 2, Figure 3 and Figure 4).

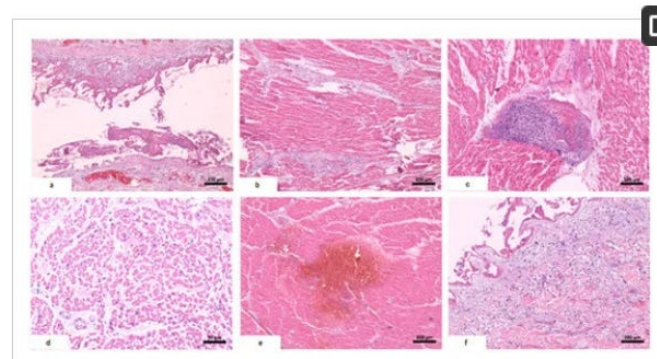

Figure 2. Histological alterations in the heart. [\(a\) Pericarditis: fibrin deposition in the pericardium and lymphocytic infiltrate.](#) [\(b\) Myocarditis: inflammatory infiltrate concentrated in intermyocardial fibrotic tracts, with focal extension to cardiac fibers.](#) (c) Foci of mixed inflammatory aggregate in the myocardium: plasma cells, lymphocytes, and neutrophils. Abstract

Carditis in childhood is a rare disease with several etiologies. We report a case of infant death due to pericarditis and myocarditis after the mRNA vaccine against COVID-19 (COVIDmRNAV). A 7-year-old male child received the first dose of the COVIDmRNAV and presented with monoarthritis and a fever non-responsive to oral antibiotics. The laboratory investigation showed signs of infection (leukocytosis, high levels of c-reactive protein). His condition rapidly deteriorated, and the patient died. The autopsy identified pericardial fibrin deposits, hemorrhagic areas in the myocardium, and normal valves. A diffuse intermyocardial inflammatory infiltrate composed of T CD8+ lymphocytes and histiocytes was identified. An antistreptolysin O (ASO) dosage showed high titers. The presence of arthritis, elevated ASO, and carditis fulfills the criteria for rheumatic fever. However, valve disease and Aschoff's nodules, present in 90% of rheumatic carditis cases, were absent in this case. The temporal correlation with mRNA vaccination prompted its inclusion as one of the etiologies. In cases of myocardial damage related to COVID-19mRNAV, it appears to be related to the expression of exosomes and lipid nanoparticles, leading to a cytokine storm. The potential effects of the COVID-19mRNAV must be considered in the pathogenesis of this disease, whether as an etiology or a contributing factor to a previously initiated myocardial injury.

2. Case Report

A 7-year-old male child presented with myalgia and fever 3 days after receiving the first dose of the COVID-19 vaccine (BNT162b2). The parents denied previous contact with sick people or a history of symptoms of upper airway infection. After seven days, he presented with monoarthritis in his right ankle. Blood tests indicated leukocytosis, but a CT scan of the ankle showed no abnormalities. He was diagnosed with septic arthritis and discharged with empirical antibiotic therapy.

After 10 days, the patient was re-evaluated due to persistent symptoms. At this time, leukocytosis had improved, and O antistreptolysin (OAS) values were normal, leading to discharge with a new outpatient antibiotic regimen. Three weeks post-symptom onset, with ongoing joint pain and walking difficulty, new tests were performed. Elevated OAS levels prompted hospital admission for intravenous antibiotic treatment with oxacillin. The joint pain improved over nine days, but the patient developed mild gastrointestinal symptoms like vomiting with blood streaks and epigastric pain. His condition rapidly deteriorated upon diagnosis of upper gastrointestinal bleeding. Post-oro-tracheal intubation, active bleeding was observed from the tube, leading to an emergency department referral. Laboratory tests indicated leukocytosis, elevated C-reactive protein levels, and negative COVID-19 polymerase chain reaction (Table 1), alongside right upper and lower lung lobe consolidations and ground-glass opacities on chest CT. Unfortunately, the patient died.

Summary

A 7 year old Brazilian boy had a Pfizer COVID-19 mRNA Vaccine. 3 days later he had muscle pain and 7 days later he presented with arthritis in his right ankle.

He was diagnosed with septic arthritis and sent home with antibiotics.

He presented again 10 days after jab with persistent symptoms and was sent home again with a new antibiotic regimen.

He presented again 3 weeks after jab with joint pain and difficulty walking, and was hospitalized and put on IV antibiotics, but 9 days into hospitalization, he developed gastrointestinal bleeding, deteriorated rapidly, had to be intubated, developed lung consolidations and died.

Autopsy showed myocarditis, pericarditis, and “disseminated vascular thromboembolism” (disseminated blood clots).

This is the youngest case published to date, with autopsy proven COVID-19 mRNA Vaccine

damage leading to death.

Notice however, that although his heart was destroyed by the Pfizer vaccine, he didn't present with cardiac symptoms.

Mar. 26, 2024 – Strongsville, OH – 4 year old Maisie Rowan “Pockets” Schmidt died unexpectedly on March 26, 2024. When her grandmother was asked if she had COVID-19 Vaccines, she responded “she had all her shots”.

4-year-old Strongsville girl taken off life support after common cold symptoms quickly worsened

MARCH 26, 2024 UPDATE: 19 News received the heartbreaking update Tuesday afternoon that Maisie was removed from life support around 11 a.m. “There was simply nothing more that could be done,” her family stated. “Thank you for the support and opportunity to share her story.”

Original story below.

CLEVELAND, Ohio (WOIO) - The parents of 4-year-old Maisie said she has long road to recovery after symptoms from a common cold took a turn for the worse.

The preschooler's parents took her to an urgent care after she came down with a stuffy nose and cough, last week.

“We got told it was just a common cold, just take her home, lots of fluids, and things of that nature,” Patric Schmidt, Maisie's dad, said.

By Saturday, her symptoms quickly worsened.

Maisie was lethargic, so her parents brought her to the emergency room near their home in Strongsville, then to Rainbow Babies and Children's Hospital.

“It's not what you expect,” Schmidt said. “We just thought it was a common cold and that we'd be taking her home the same day never thought we'd be down here.”

Not long after arriving at the hospital, Schmidt said Maisie was put into a medically induced coma.

On Monday, doctors found she had suffered a stroke.

“She went in for a CT scan they said that there was some bleeding on the brain, so they wanted to get a scan of that and in the process of doing so they found that she actually had a very large stroke on the right side of her brain,” Schmidt said.

The 4-year-old was quickly brought in for brain surgery shortly after.

Her dad said part of her brain was so swollen it had to be removed to save her life.

Schmidt said Maisie's doctors expect her recovery will take several months.

[Request demo](#)

"We got told it was just a common cold, just take her home, lots of fluids, and things of that nature," the dad told [Cleveland 19](#) before his daughter's tragic passing. By Saturday, her symptoms had worsened.

Following a test on Monday, doctors had discovered that the four-year-old had suffered a stroke. The dad explained: "She went in for a CT scan. They said that there was some bleeding on the brain, so they wanted to get a scan of that and in the process of doing so they found that she actually had a very large stroke on the right side of her brain."

The swelling in her brain had become so severe that part of it had to be removed in an attempt to save her life, Patric said. "She is one of the most lovable people that you'll ever meet," he added. "She's so smart and so willing to help anyone and she wants everyone to love her just like she loves everyone else."

Maisie was expected to stay hooked up to life support machines and stay in a medical-induced coma for "several months", according to a post on a [GoFundMe](#) campaign set up to support the family.

Now, in a tragic update on the campaign page on Tuesday morning, Maisie's uncle announced that the little girl had passed away. "I wish I could deliver a happy ending to this story," wrote Mike.

"I wish I knew the right words to say to ease my loved ones pains and all those who were touched by Maisie. Around 11am today Maisie passed away. For those of you who were blessed by knowing Maisie you would know how caring, smart, fun and loving she was. She exhibited the best traits you could ask for out of a person."

Maisie's Family Expense Fund

Team fundraiser

Michael Brigadier and 2 others are organizing this fundraiser on behalf of Christin Brigadier.

On March 23rd Maisie made a trip to the hospital with what everyone thought would be an in and out visit. Things have turned for the worst. Currently 4 year old Maisie is fighting for her life and is on multiple forms of life support in order to give her body a fighting chance to come back from the human metapneumovirus. Most people may exhibit cold symptoms with this virus but unfortunately it's grabbed a hold of Maisie and isn't letting go. Her prognosis is she may be in an induced coma and on life support for possibly several months. This fund is to support her immediate family while they deal with supporting Maisie and her long road to recovery. She isn't out of the woods just yet but we need your help of lifting the burden of everyday life such as helping her father take off work to support his daughter. This is a close-nit family and it has clearly been exhausting in everyway imaginable. I'm pleading for you to donate whatever you can to help keep this family TOGETHER during this difficult time.

March 25th, 2024 by Mike and Ashley Brigadier, Organizer

Maisie has made it through surgery. The surgery team had to remove a large section of her cranium to relieve cranial pressure as well as part of her brain. The part of her brain that was removed usually serves of no significance and shouldn't affect any crucial functions after recovery. This was necessary to save her life. The team has left part of the cranium off to ensure lessen the chance of any additional cranial pressure emergencies. Maisie is still fighting.

March 26th, 2024 by Mike and Ashley Brigadier, Organizer

I wish I could deliver a happy ending to this story. I wish I knew the right words to say to ease my loved ones pains and all those who were touched by Maisie. Around 11am today Maisie passed away. Typing these words hours after are still so surreal. I'm in disbelief that this could happen to such a sweet family. For those of you who were blessed by knowing Maisie you would know how caring, smart, fun and loving she was. She exhibited the best traits you could ask for out of a person. If there was one thing I'll

Maisie Rowan "Pockets" Schmidt Obituary

-In Loving Memory of Maisie: A Bright Light Dimmed Too Soon-

Our sweet girl, Maisie Rowan Schmidt, passed away on March 26, 2024, in Cleveland, Ohio, at the age of 4. Maisie was born on July 25, 2019, in Westlake, Ohio as our rainbow baby after enduring loss and IUI treatments to conceive her.

Hundreds of children have died after taking COVID-19 mRNA Vaccines but the authorities are engaging in criminal conduct covering up these deaths.

Jan. 13, 2022 - Groton, MA - 7 year old Cassidy Patrice Baracka received a COVID-19 Vaccine on Jan. 13, 2022. She had severe reactions to the mRNA jab and died suddenly 4.5 days later on Jan. 18, 2022. The medical examiner, Steve Schwarz, allegedly committed fraud on her death certificate and blamed COVID-19 instead.

- The death certificate makes no mention of COVID-19 Vaccine taken 4 days prior to death - those are multiple federal felonies that the medical examiner, Steve Schwarz, committed on her death certificate.
- This was referred to the Massachusetts Attorney General for "criminal investigation."
- This information was presented by John Beaudoin to the New Hampshire Senate Health and Human Services on January 10, 2024.

Cassidy Patrice Baracka

March 24, 2014 — January 18, 2022

"Sudden And Unexpected" @toobaffled

MA: Cassidy Patrice Baracka, 7, lost her life on January 18, 2022 as a result of complications from Covid-19.

"Cassidy was injected with the covid vaccine on January 13, 2022. She reacted within five minutes and vomited 8 to 10 hours. Cassidy died 4 1/2 days later on January 18th."

There was no mention of her death attributed to the covid vaccine. Those are multiple federal felonies that the medical examiner, Steve Schwarz, committed on her death certificate. This was referred to the Massachusetts Attorney General for criminal investigation."

This information was presented by John Beaudoin to the New Hampshire Senate Health and Human Services on January 10, 2024.

The family of a young girl who was about to start a new school year has been left devastated by her sudden death after she suffered a brain bleed and died in her sleep.

Zali June Breitkreutz died at home in Townsville in North [Queensland](#) last Monday.

The eight-year-old was due to start Year 4 at St Anthony's Catholic College this month.

It's understood Zali complained of a mild headache on the day of her death but showed no other symptoms.

Her cause of death was determined to be a type of stroke known as an intracerebral haemorrhage.

Her devastated family are preparing for her funeral which will be held at The Lakes Chapel at Morley's Funeral Home in West End on Thursday at 2pm.

Mr Breitkreutz said Zali showed no signs that she had any symptoms of the deadly condition.

'There was nothing that could be done, no symptoms, just a minor headache,' he told Daily Mail.

Attendees of Zali's funeral have been asked to wear something bright to the service and a wake will be held at the Brothers Leagues Club in Kirwan from 5pm.

Intracerebral haemorrhage is a type of bleeding in the brain tissue which is caused by high blood pressure.

The condition causes blood to be released into the brain, eventually leading to a stroke.

The disease can be treated by removing a clot that forms in the brain, reducing the amount of pressure that is built up.

However, the damage caused by the illness can be long term.

Jan. 21, 2024 – Seffner, FL – 8 year old Ava Marshall died unexpectedly & tragically midnight Jan. 21, 2024. Her mother was deeply affected by COVID-19 mRNA Vaccine propaganda. Highly probable Ava was COVID-19 Vaccinated.

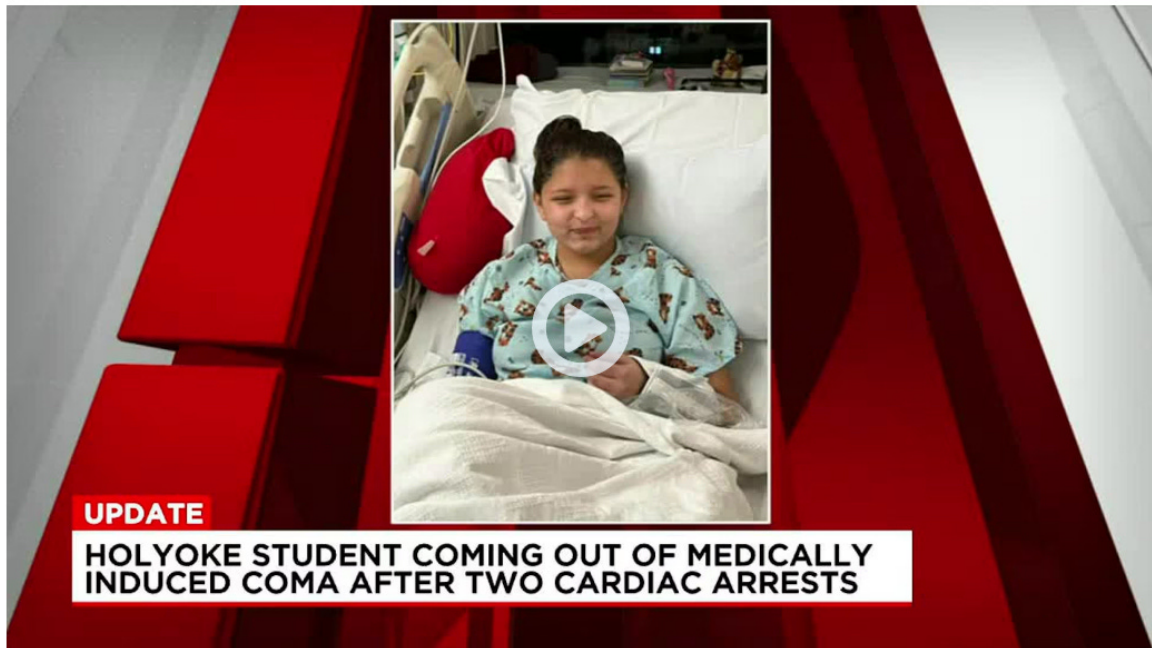

Thank you all for your support. I'm overwhelmed by such generosity and kindness from everyone. I recieved Ava's urn this morning, which came all the way from Poland. It's a beautiful tribute to her memory.

The world lost Ava unexpectedly and tragically around midnight 1/21/24. We are asking all who love Courtney, Christopher, Ayna, Cameron, Georgia, Isabella and the rest of the family to support them any way they can. Through this website you can provide the family a donation or send a meal. While the family is grieving, putting together a meal may be the last thing they are thinking about. This website coordinates dinners and

Jan. 7, 2024 - Holyoke, MA - 12 year old Nevaeh Vieira collapsed in her mom's bedroom Jan. 7/8, 2023 & had two cardiac arrests & was placed into a coma. She also suffered some minor brain damage from a stroke. COVID-19 mRNA Vaccine status is key info in this case.

Holyoke 7th grader awake after 2 cardiac arrests, 4 days in medically-induced coma

A Holyoke seventh grader is now out of her medically induced coma nearly a week after she suffered two cardiac arrest episodes

By [Maria Wilson](#) and [Samantha O'Connor](#)

Published: Jan. 15, 2023 at 4:17 PM MST | Updated: Jan. 15, 2023 at 7:02 PM MST

HOLYOKE, Mass. (WGGB/WSHM) - A Holyoke seventh grader is now out of her medically induced coma nearly a week after [she suffered two cardiac arrest episodes](#) and now, Western Mass News is getting answers on the importance of a technique used to save her life

After Nevaeh Vieira spent four days in a medically induced coma, her mother, Krissy, told Western Mass News that her daughter is expected to make a full recovery. [The seventh grader collapsed in her mother's bedroom last weekend after complaining of chest pains. She suffered from two cardiac arrests and was placed into a medically induced coma for four days so that her body could recover](#)

[Nevaeh did suffer some minor brain damage from a stroke she sustained from a lack of oxygen.](#)

After collapsing, Vieira's mother quickly sprung into action and began administering chest compressions until the EMTs arrived. It's an act that pediatrician Dr. John Kelley said probably saved her life.

"Having an immediate response like that within minutes of the event is absolutely crucial...If you have no circulation to the brain for five minutes or more, it's very unlikely you're going to get the person back," Kelley explained.

Western Mass News asked Kelley about the importance of cardiopulmonary resuscitation, more commonly known as CPR.

Dec. 8, 2023 - Palos Hills, IL - 7 year old Thomas Stachon was healthy until he "suddenly took ill and was placed in an induced coma due to brain inflammation". He died on Dec. 8, 2023.

GoFundMe Started To Help Cover Final Costs Of Thomas Stachon, 7

PALOS HILLS, IL — As a Palos Hills family mourns the [unexpected death of an Oak Ridge Elementary School second-grader](#), family members have started a [GoFundMe campaign](#) to help with funeral costs and other related expenses.

Thomas Stachon, 7, died after a brief illness. The boy had been happy and healthy until he suddenly took ill and was placed in an induced coma due to brain inflammation. Thomas died on Dec. 8 after Mass was said at his bedside.

“His untimely departure has created a profound void in the hearts of those who held him dear — as a beloved son, grandson, brother, nephew, cousin, and friend,” said Juan Quintero, the boy’s uncle. In this challenging time, we are reaching out to our friends, family, and community for support. The Stachon family is facing unexpected expenses related to Tommy’s passing, including funeral costs and other unforeseen financial burdens.”

>>> [Support for the Stachon Family in Memory of Thomas](#)

Family members said the boy they called Tommy exemplified the spirit of generosity, giving renewed life to four other children through organ donation.

My Take...

Anyone who is still passively watching this, is part of the problem.

Taking action means something as simple as writing a short letter to your political representatives.

I just wrote a short letter to Alberta Premier Danielle Smith. It will be ignored but her Office of the Premier will never be able to say they didn’t know.

I urge others to do the same.

Attention: Alberta Premier Danielle Smith and Alberta Minister of Health Adriana LaGrange

Re: Immediate suspension of COVID-19 Vaccines in children of all ages, in Alberta

I am writing in regards to a new peer-reviewed scientific paper published on February 13, 2024 by Brazilian Pathologists from Sao Paulo State University, Ribeirao Preto Medical School and University Hospital of the Federal University of Maranhao, led by Dr.Pedro Manuel Barros de Sousa and colleagues.

A 7 year old Brazilian boy had his 1st Pfizer COVID-19 mRNA Vaccine and developed side effects starting 3 days later, which culminated in his death about 4 weeks after vaccination. Autopsy confirmed extensive inflammation of his heart as well as disseminated blood clotting caused by the Pfizer vaccine.

I have documented over 100 children dying suddenly or unexpectedly after taking one or more COVID-19 mRNA Vaccines, published on my substack, makismd.substack.com. I can provide the names of those children to the Premier's Office or the Office of the Minister of Health.

Based on my expertise and experience as an Alberta physician, Board Certified in Nuclear Medicine Radiology and Oncology, with a degree in Immunology, **I strongly urge you to immediately halt the administration of all COVID-19 Vaccines to children of all ages, in the province of Alberta.**

I believe the current recommendations, issued by Alberta Health Services, encouraging COVID-19 Vaccination of children as young as 6 months old, **are consistent with medical malpractice, and medical malfeasance**, given what is now published in peer reviewed medical literature.

It is also my understanding that Alberta Health Services Officials are illegally blocking the reporting of adverse events following COVID-19 Vaccination, and that Alberta doctors who have filed these reports have been threatened by AHS Leadership. This requires a proper, independent investigation.

I look forward to your immediate attention to this urgent matter.

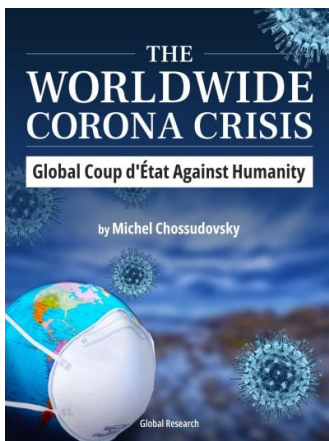

Dr.Viliam Makis MD, FRCPC

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky’s book is a rock upon which to sustain our fight. —Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. —David Skripac

A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global

coup d'état under way called "The Great Reset" that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -Edward Curtin
