Within the fortified corridors of politico-industrial power in Washington and in the hallowed bastion of the European Commission in Brussels, the same dark plans are being pushed forward: to alter the genetic code of life so as to make both man and nature patentable, controllable and servile to the cause of the techno-industrial god of insentient progress.

The latest manifestation of this process has now emerged within the food and farming sector and strongly threatens the future of all 'GMO Free' produce and terrains. It goes under the deliberately innocuous heading 'New Genomic Techniques' (NGT).

The US agribusiness industry set the agricultural genetic engineering agenda more than two decades ago, when a judge in a New York court room pronounced GMO and conventionally grown food 'indistinguishable'. A judgement that went against the essential scientific evidence and played into the gleeful hands of the biotech industry. The precise term used was 'substantial equivalence'.

This allowed the marketing of US GMO foods to go ahead with no labelling to warn consumers of its composition or provenance, thus denying them the right to choose.

US farmers have been likewise left to fight for the right to sell their seeds and grains as 'GMO Free', as the Monsanto corporation gave itself the authority to fine any farmer suffering the misfortune of having their crop contaminated by rogue GM varieties whose pollen was carried by wind or insects onto their farmland. Yes, prosecuted for being found to have a Monsanto patented GM plant growing on their field!

From the outset, European farmers and consumers strongly resisted attempts to get GMO's into the food chain and onto the fields. Battles to uphold the sovereignty of 'real foods' and the right for organic and traditional produce to be legally protected against GM cross contamination, raged throughout the 1990's and beyond - right the way up to the present day*.

Consequently, in spite of intense GM industry lobbying of the EU Commission in Brussels, less than 2% of European farmland grows GM crops.

Stung by their failure to make progress – and the subsequent collapse of the Monsanto corporation – the wounded GM battleship came up with a guileful sleight of hand to try and beat the regulatory protection of a largely GMO Free Europe.

They invented something called ‘Gene Edited’ crops going under the synonym ‘CRISPR’ (Clustered Regularly Interspaced Short Palindromic Repeats). Gene editing, they claim, is not the same as introducing foreign bacteria into the seed genome to make it resistant to an intensive chemical spraying regime.

Gene editing, they posit, simply removes/alters genes to make the plant perform according to the requirements of the biotech control program. A program that exerts sufficient ‘alteration’ to the natural composition of the plant to make it patentable as a ‘novel food’, thus enabling all profits to flow back into the pockets of the ‘designer’ corporations.

Recognising that a particularly cunning Trojan Horse was being designed to get ‘GMO by another name’ into the food chain, activists clubbed together and took the case to the European Court of Justice.

On 25 July 2018, the court rejected the bio-tech industry’s claim that CRISPR was no longer a GMO, clarifying that organisms created by new mutagenesis techniques are subject to existing EU GMO laws. A great victory for the defence of food sovereignty and the preservation of the natural biodiversity of farm crops.

But the GMO and chemical agribusiness behemoth knows no end to its determination to exert its sterile stamp on nature. Just four corporations now own more than 50% of the total world seed market. Their bio-piracy of original seed genomes and subsequent attempt to patent (privatise) ‘living organisms of nature’ has re-emerged in a new attempt to overthrow resistance to gene engineering.

The new deception is called New Genomic Techniques (NGT) and its right to operate is now starting its passage through the legislative assessment process at the European Commission.

WARNING: there is nothing about NGT’s that carries any benefit for the environment or food quality. Quite the opposite, it is a further tinkering with the genetics of life, whose purpose is solely to move living organisms out of traditional cross-breeding practices and into patented laboratory created industrial designer-foods. Foods able to be manipulated to ultimately replace the need for existing soil/field based agricultural traditions practised by millions of farmers throughout the world.

This agenda is a central component of the World Economic Forum programme known as ‘The Great Reset’ and particularly its ‘Green New Deal’ and ‘Fourth Industrial Revolution’. Shockingly it is supported by the once ‘green’ King Charles III of England, who operates alongside WEF executive chairman Klaus Schwab and recently gave Royal Assent to new biotech innovations which stand at the opposite end of the spectrum from organic and agro-ecological farming practices.

Consumers in Europe have demanded the ‘right to know’ the provenance and composition

of their foods, but the ability to hold onto this right is being undermined even as I write. The new GM legislation has recently been under debate in the European parliament and will later come under the scrutiny of the EU Board of Ministers. Italy, Austria and Holland are strongly opposed, but other countries are yet to show their colours.

GMO ingredients have to be labelled as such within the EU. But NGT's won't carry this requirement, if they come into law. A whole range of existing risk assessment precautions will go, as the parameters of what is GMO and what is not, get deliberately blurred and diffused.

There will be no mechanisms for enabling conventional non organic foods staying 'GMO Free'; farmers and consumers alike will be disenfranchised from their commitment to food sovereignty.

If this agenda is adopted, there will be no detection rules and no methods of monitoring the status of crops.

Now is the moment to DEMAND that the Minister of Agriculture and Minister of the Environment in your country, never allow NGT's to get onto the statute books during their term of office. Demand that they completely reject the New Genomic Techniques bill which they will be called to vote on in the European Commission.

If you want to retain an element of control over your and your children's health and over the food you eat, as well as help preserve the vital biodiversity of nature within this planet's irreplaceable natural environment, then make sure to take this vital step today!

Play your part in overcoming the sick wishes of the cabal that is attempting to subvert the very life support systems which have kept this beautiful living planet in vibrant existence for billions of years.

Let us join together in never allowing the insentient perpetrators of ecocide to play their cold roulette with the fundamental building blocks of life itself.

Julian Rose and Jadwiga Lopata successfully campaigned to block a big corporate push to get GM seeds and plants into Poland. They succeeded in persuading the Polish government to introduce a national GMO ban in 2006 which still remains in place today.

Julian is an early pioneer of UK organic farming, writer and international activist. See his website www.julianrose.info.
