12 year old soccer player Holly injured by HPV Vaccine (Gardasil)

This is Holly's story – Gardasil. "This is our story so far (as at 1st May 2016)"

Our daughter Holly, was an energetic, unstoppable, full-of-life 12-year-old. Very sporty, playing netball, rugby, rounders and football for a local club, the school, and county. She was also part of the Newcastle United development academy. She was so full of energy; we would send her for 15 minutes on the trampoline just to use some energy up. She loved sports, she loved being active and she loved being outdoors.

Then, between November 2013 and May 2014, she was given the HPV vaccinations. Our life would never be the same again.

A few days or so following Holly's final HPV vaccination, we noticed she would vomit for what seemed no reason at all. For example, she was on the football pitch (training for NUFC), and she vomited while on the pitch, then carried on playing. We put it down to a one off, but as the months rolled on the vomiting got worse and worse and the period of illness became longer.

We took Holly to see our GP on numerous occasions, the same answer came back... it's a

vomiting bug. After 4 months, when the sickness became worse and she felt continuously nauseous, no energy (to the point of not being able to speak) and lightheaded, we pinpointed that these “episodes” always came around the time of her period. We were sure this was hormone related.

Doctors prescribed anti-nausea drugs, but nothing worked. We tried the contraceptive pill, that didn't work. In addition, when Holly was well she seemed to be plagued with injury, pulled muscles, sore joints – we put it down to her not being at the peak of fitness anymore.

Another appointment to the GPs and they decided the best solution would be to stop her periods all together, she was given the depo injection. This was followed by possibly the worst 3 months ever. She was in an “episode” the whole time, constantly vomiting, feeling nauseous and being unable to get out of bed due to extreme fatigue.

She was in and out of hospital because she was so ill. Following every test imaginable, Drs could find nothing wrong with her. They tried to say she was bulimic. We knew this was not the case, we knew it was hormone related.

School employees were onto us because she was unable to go to school she was so ill, and no one would believe there was actually anything wrong with our precious daughter. And the worst thing was, 3 months of not being at school, friendship groups move on, friends became more distant, they just grew apart. Holly was losing contact with the outside world.

We searched to try and find a Dr who could help. At one point we were seeing around 6 different Drs both private and NHS. Eventually we were pointed in the direction of a Dr who thought she knew what was wrong with Holly. Holly was diagnosed with Cyclical Vomiting Syndrome, which seems reasonable with the following symptoms. Some later tests also revealed that Holly no longer had any primary defence system, it had completely gone.

Her primary symptoms were:

- Extreme constant nausea
- Vomiting up to 10 times a day
- Dizziness
- Extreme fatigue (to the point where you cannot even speak or move)
- Low blood pressure

In addition, Holly has also suffered:

- Joint pain
- Muscle pain
- Easily injured Broken wrist (which we think is due to weak bones)

Holly was so poorly that doctors recommended that when she had a period it would be best to be admitted to hospital, sedate her for around 2 days and give her lots of IV anti sickness medication. This worked, Holly went back to school on a part time basis, eventually going back full time. However her energy levels never ever returned, she was still ill and hospitalized for every period she had, she lost her friendships & was not allowed to go skiing with the school as it was classed as too much of a risk for the school. She was unable to do all the sports she did before because of the fatigue, she would sleep whenever she could, her sporting activity was virtually non-existent.”

“Nevertheless, we were delighted because we seemed to have the situation under some type of control for around 12 months. She was still ill every time she had a period, but we decided 3 days in hospital to get her well again each time was doable and we sort of adapted to that life.

About 6 months ago however these “episodes” started appearing outside of when Holly would have a period. Her injury situation was getting worse, sore muscles, sore knee to name but a few. The fatigue was worsening, she was constantly tired, and didn’t want to go out to visit friends and would spend most of her time in her Pyjamas.

2 months following that, Holly broke her wrist in two places at football. Nothing out of the ordinary, a save which she had done thousands of times before. By this time, we were starting to do more research. HPV injury had occurred to us previously, however was pushed out of hand by doctors. We decided to look more into it, and found hundreds of girls in a similar situation to Holly.

At the present time, our life is on hold, a cold or sore throat is enough now to put our daughter into and “episode” and be admitted to hospital. Stress will put her in hospital. A period will put her in hospital. In a 12-month period she was in hospital 11 times spanning well over 50 days. We know all the hospital staff! Her Dr is now trying to tell us that some of it is in her head and sent her to see a child psychiatrist who has confirmed to us that there is absolutely nothing wrong with Hollys mind! Holly has also been told she has Chronic Fatigue Syndrome.

While I fully believe Holly is fatigued, and it is chronic, I believe that there is something fighting her auto immune system (tests prove this) and this is to do with the vaccine. I feel the same about the Cyclical Vomiting Syndrome.

So many sporty girls having the same set of similar symptoms following the vaccine cannot be coincidence, no matter what the Drs say.

We are currently receiving alternative therapy treatment to try and take the HPV vaccine out of Holly’s body. Only time will tell if the effects of the HPV vaccine are reversible. Ironical, Holly wants to be a Dr, yet no Dr will believe what this vaccine has done!

Sadly because Holly’s situation has continued to deteriorate, she is no longer able to attend school. Instead, she is a prisoner in her bedroom; often too exhausted to even get out of bed. She receives home (2 hours) 1-1 tuition twice a week. Each session means she is incapable of leaving the house for up to 2 days afterwards. Even so, Holly wants to continue. With so many decisions having been taken out of her hands, who am I to decide if she should continue with tuition?

I cannot praise my daughter enough on her strength of character, determination and positivity to “work around” this situation. Her not being in school has also impacted her social life. She rarely sees her friends these days. If they do come round, she can only tolerate it for very short period of time before she is worn out.

Holly told me last time they came, she could barely keep her eyes open after 30 minutes of chat! How is this normal?

There needs to be more information given to parents on this vaccine, not the current information, the real information, stories like this, stories of girls who have been injured by

HPV vaccines. The world is waking up and I hope it's not too long before people realise the dangers of this. My eyes are well and truly open now, I want to shake everyone so they see what is happening and how it's all being pushed out of hand as nonsense.

Had I known then what I know now, I would NEVER have allowed my daughter anywhere near HPV vaccines!

UPDATE May 2017. Holly has now also been diagnosed with POTS. (Postural Tachycardia Syndrome) and also CFS (Chronic Fatigue Syndrome)

CBS News Discusses risks of Gardasil in 2010 (High School lacrosse player Amanda Ratner developed an auto-immune disease, macrophagic myofasciitis after HPV Vaccine on July 13, 2007):

[Click here to view the video](#)

 AMANDA RATNER, *
 *
 Petitioner, * No. 10-150V
 * Special Master Christian J. Moran
 *
 v. * Filed: February 8, 2013
 *
 SECRETARY OF HEALTH * Stipulation; human papilloma virus (HPV)
 AND HUMAN SERVICES, * vaccine; macrophagic myofasciitis
 *
 Respondent. *

Michael A. London, Douglas & London, New York, NY, for Petitioner;
Darryl R. Wishard, U.S. Department of Justice, Washington, D.C., for Respondent.

UNPUBLISHED DECISION¹

On February 6, 2013, the parties filed a joint stipulation concerning the petition for compensation filed by Amanda Ratner on March 9, 2010. In her petition, petitioner alleged that the human papillomavirus (“HPV”) vaccine, which is contained in the Vaccine Injury Table (the “Table”), 42 C.F.R. §100.3(a), and which she received on July 13, 2007, caused her to suffer macrophagic myofasciitis (“MFF”) and its resulting sequelae, and that she experienced the residual effects of this injury for more than six months. Respondent denies that petitioner has MFF, and denies that the HPV vaccine either caused or significantly aggravated petitioner’s alleged condition or any other injury.

AAVP: Outraged by Mexican Girl’s Death After HPV Vaccine

Valencia, Spain, 28th December 2015

Last 21st December Ximena M, from Mexico, died when she was only 14 years old after two years of suffering that started when she received two shots of the HPV vaccine. It was at that moment when her ordeal began.

The Spanish Association of Affected people for the HPV vaccine wants to express our most sincere sympathy to all her family and friends. death outrages us for several reasons.

First, because Ximena has suffered adverse reactions that are listed in the EMA and VAERS databases, yet died with a diagnosis of unspecific myositis (inflammation and degeneration of muscle tissue) and autoimmune disease.

Second, because we know that the Secretary of Health of Mexico was aware of this case, as was the European Medicines Agency.

The AAVP sent to the EMA last October 19th a database of over 300 cases of young affected people in Spain, Colombia, France and Mexico who have suffered adverse reactions after receiving the HPV vaccine.

Third, because Ximena's mother sent her daughter's information to be investigated, as well as many other mothers have done, being registered as "case 6" in the Mexican database, but it is obvious that it has been for nothing.

The AAVP has been working for many years collecting information from young affected people concerned for their cases to be investigated; in recent months we have sent all this information to the EMA. Nevertheless, the only response we have received is that the risk-benefit balance remains favorable. What is clear is that the risk exists and that we will not be able to know if the balance is favorable or not until the moment that the AR's are recognized, which paradoxically are already registered in the leaflets of the vaccine and the EMA database.

Ximena's case is not an isolated case; other families are living this same ordeal, terrified thinking that their daughter may be the next victim. But it seems this does not interest health and political authorities at all. Governments in many countries-including Spain-are emphatically denying that the vaccine is causing the symptoms these young people suffer, declaring that everything is due to psychogenic illness, which from our point of view and some experts is completely unsustainable.

Unfortunately, another girl has died and we wonder how many more girls will have to do the same. How many more will have to suffer serious adverse reactions before Health Authorities recognize what is happening and investigate with scientific rigor why these effects happen.

We believe her death could have been avoided if health authorities had acted with due diligence and caution.

Therefore, AAVP requests health authorities, political representatives and medical practitioners act responsibly, empathize with the affected families and research so that there are no more victims. Asociación de Afectadas por la Vacuna del Papiloma. AAVP

Japanese Government halted HPV Vaccine Gardasil in June 2013 and Big Pharma is still angry about it.

Japan's halt of regular HPV vaccine to cause thousands of cancer deaths: study

Reuters

February 10, 2020 11:41 PM MST · Updated 4 years ago

TOKYO (Reuters) - A decision by Japan to stop recommending adolescent girls receive a HPV vaccination will likely result in almost 11,000 deaths from cervical cancer if it is not reversed, according to a study in a prestigious medical journal.

The HPV vaccine has been a political lightning rod in Japan, where claims of side effects prompted the government to halt active recommendation of the shots in June 2013.

A study published in The Lancet Public Health on Monday said that policy would lead to more than 24,600 cervical cancer cases that could have been prevented.

Using Japanese population and medical data and forecasted cervical cancer incidence, the study found that, if nothing changes, there would be 10,800 preventable deaths from cervical cancer over the next 50 years.

"If the government were to resume promoting the HPV vaccine in Japan, our study shows that we could avoid most of this loss of life," said study co-author Sharon Hanley, a professor at Hokkaido University in northern Japan.

Japan's Halt of Regular HPV Vaccine to Cause Thousands of Cancer Deaths: Study

Reuters

February 10, 2020

TOKYO (Reuters) - A decision by Japan to stop recommending adolescent girls receive a HPV vaccination will likely result in almost 11,000 deaths from cervical cancer if it is not reversed, according to a study in a prestigious medical journal.

The HPV vaccine has been a political lightning rod in Japan, where claims of side effects prompted the government to halt active recommendation of the shots in June 2013.

A study published in The Lancet Public Health on Monday said that policy would lead to more than 24,600 cervical cancer cases that could have been prevented.

Using Japanese population and medical data and forecasted cervical cancer incidence, the study found that, if nothing changes, there would be 10,800 preventable deaths from cervical cancer over the next 50 years.

"If the government were to resume promoting the HPV vaccine in Japan, our study shows that we could avoid most of this loss of life," said study co-author Sharon Hanley, a professor at Hokkaido University in northern Japan.

The Japanese government could not immediately be reached for comment on the Lancet report. Kei Tamura, deputy director of the Health Ministry's immunization office, said in an interview in December that "there is a sort of inner conflict in that we are not aggressively,

proactively recommending it, but I do think it's better to take it."

HPV, which stands for the human papilloma virus, causes genital warts in both sexes and cervical cancer in women. Each year, about 10,000 Japanese women are newly diagnosed with the cancer while 3,000 die from it.

Uptake was swift when the vaccine was introduced in Japan in 2009, with immunization reaching about 70% in adolescent girls.

However, the vaccination rate has since slid to below 1% after the health ministry suspended its active recommendation after reports of side effects including muscle pain, sleep disorders, and light and sound sensitivity.

Females aged 12-16 can still get free HPV vaccines under Japan's national healthcare system if they ask for it. Everyone else must pay out of pocket.

In November, ruling party legislator Junko Mihara, a cervical cancer survivor, said lawmakers would hold talks on the vaccine this summer. Tokyo Governor Yuriko Koike and eight other regional leaders signed a letter supporting HPV vaccination.

The Health Ministry said in December it was working on improving leaflets on the vaccine, but had no time table for a return to regular immunization.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky’s book is a rock upon which to sustain our fight. —Dr. Emanuel Garcia

In fifteen science-based chapters, Michel traces the false covid pandemic, how the PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this pandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists. —Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. —David Skripac

A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global coup d’état under way called “The Great Reset” that if not resisted and defeated by freedom

loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it's too late. You will not find so much valuable information and analysis in one place. -Edward Curtin
