“I speak as the granddaughter of a woman who lost nine siblings to the Holocaust. We have an obligation to speak out against murder in our own communities.” – Naomi Wolf [1]

“Our lives begin to end the day we become silent about things that matter.” – Martin Luther King (cited as favorite quote by Magda Havas) [2][3]

A smoking gun?

Reams of data are coming out of Pfizer’s internal documents, released under court orders from a Texas judge. The judge ruled that the Freedom of Information Act (FOIA) request for the data guiding the decision by the U.S. Food and Drug Administration to approve the approval of the Pfizer/BioNTech COVID-19 vaccine “is of paramount public importance.” [4]

The documents were released at a rate of 55,000 pages per month. One of the individuals rolling up her sleeves and digging into the numbers alongside a team of reportedly hundreds of doctors, scientists, oncologists, medical fraud investigators and other experts was Naomi Wolf. The facts she revealed, based on Pfizer’s own documents showed shocking statistics, including 1223 fatalities during a three month period, half of the adverse events, which included fatalities, occurred within 48 hours of the injection, and the vaccine was killing adults, babies and fetuses with adverse events ranging from 3 to 1 to 8 to 1. [5]

Pfizer had documented these and other hazards by February 2021 and rather than inform the public, they urged people, including pregnant mothers, with intensive campaigns to get

the jab. [6]

Wolf has spoken up on this subject. In numerous articles online, and in the media interviews. [7]

But earlier this month, on May 9, the UK media regulator Ofcom found the broadcaster GB News of an interview between Naomi Wolf and host Mark Steyn on October 4 2022 in breach of Broadcast rules. Ofcom said the interview guest was relaying views that would be potentially harmful to the public. Ofcom received 422 complaints about the show's comments being "dangerous" and including "misinformation" that was "unopposed" by Steyn. [8]

Is a journalist citing information from a FOIA requested release of information and bringing it to the attention of the public an example of "dangerous" information harmful to the public being aired?

Another interesting twist to the COVID "pandemic" is the interesting case of 5G installations around the globe that were happening at the same time as the virus was allegedly spreading around the globe.

A number of studies, for instance [here](#), [here](#), and [here](#), document illnesses attributable to radio frequency radiation. This is not necessarily to say that the virus wasn't hazardous. However, the two dynamics can act in a synergistic way to complicate the lives for those subjected to both in intense ways.

On this week's episode of the Global Research News Hour we talk to Naomi Wolf about her research into Pfizer's internal files and about the immense act of what she calls censorship recently directed toward her and Mark Steyn by Ofcom, and the UK government actually linked to it. We also speak with Magda Havas, an emerita professor from Trent University and specialist in environmental toxicology who has spoken of the harms associated with radio frequency radiation for years. She discusses the links between COVID-19 and the rise of 5G in our communities and across the planet. Finally, we speak briefly to Dr. Brent Roussin, the Chief Provincial Public Health Officer in Manitoba about how he defends his own decisions related to COVID-19 in the face of many critics present on this program.

Dr. Naomi Wolf is a former political consultant and Co-Founder of the [DailyClout](#), a platform that empowers democracy-building. She is the author of the best-selling [The Beauty Myth](#), which launched her reputation as a leading voice within Third Wave feminism, and she authored the 2007 book [The End Of America: Letter of Warning to a Young Patriot](#).

Professor Magda Havas is Professor Emerita at Trent University and a specialist on Environmental Toxicology. Dr. Havas has been an advisor to several public interest groups and educational groups concerned with the health of the environment. She is currently science advisor on EMF-related issues to several non-profit organizations.

Dr. Brent Roussin was the Chief Provincial Public Health Officer throughout the pandemic in Manitoba.
