*On Nov. 26, 2023, 24 year old healthcare worker Jayden's life was turned upside down. She had been experiencing a migraine for days. On Nov. 27, a CT and MRI confirmed she had a brain tumor just a bit smaller than baseball in size.*

Jayden Zientara, a health care partner at Vanderbilt University Hospital in Nashville, Tennessee, recently underwent brain surgery.

The 24-year-old said it all started with a bad migraine in late Nov. 2023.

"I never get migraines or headaches, so like any other person, I took Ibuprofen and Tylenol, hoping my headache would go away," she said.

After another miserable 24 hours, Zientara decided to go to urgent care and see if the doctors there could help address her pain.

"I was prescribed ... sleep meds and headache meds ... and was told that if my migraine didn't go away in the next 24 hours, that I needed to go get a CT scan," she recalled.

Two days later, Zientara said the pain had not subsided — so she went to get a scan.

“After I received the CT, they told me I had a brain mass and needed to get transferred to Vanderbilt for an MRI,” she said.

The MRI showed that Zientara had a brain tumor roughly the size of a baseball — and that she would need surgery to remove it.

Within a few days, Zientara was in surgery.

Doctors removed and biopsied her tumor — and confirmed that it was brain cancer.

“My specific brain tumor is called an astrocytoma, and it’s commonly found in men over 40 and children under two,” she said.

The rare tumor took doctors about 12 hours to remove, she said.

However, Zientara needed to be awake for part of it so that her brain would be stimulated during surgery.

Prior to the procedure, Zientara said doctors asked her what they could engage her on during the procedure to stimulate her brain.

Zientara said the Boston Celtics and her little brother were topics she “could talk about for hours.”

“I also told them I could list all 50 states in alphabetic order,” she said.

And so, when the health staff asked her about the 50 states during surgery, Zientara began to sing a song while doctors were removing her brain tumor.

“It’s a song I’ve known since I was young,” she told Fox News Digital.

She added, “I learned it in elementary school, and I’ve never forgotten it.”

Although Zientara said she does not remember being awake during the surgery, she loved

seeing the video of herself singing and naming all 50 states.

The patient's mom, Jamie Zientara, said she was shocked to see her daughter recite such a thing while undergoing surgery.

"I knew that there would be some type of video recorded," she said.

"However, I was not expecting that."

She added, "The exposure and outpouring of support she has received has been nothing short of amazing."

Since then, Jayden Zientara has been home with her family in Illinois ahead of her upcoming chemotherapy and radiation treatments.

Jayden Zientara said each of her treatments will last for six weeks, but she's not afraid of the process.

"After my first brain surgery, I guess you could say I'm a pro," she joked.

The care worker said her mother has been a huge support to her during this time and she's grateful for that.

Migraines are a bad sign for the COVID-19 vaccinated.

Mar. 21, 2024 – 37 year old Antiques Roadshow host Theo Burrell has terminal brain cancer (glioblastoma). The first symptom was car sickness on a journey I'd done many times before. I'd never had car sickness as a child so that was strange. Then I had what I thought was a migraine – visual disturbance, lots of vomiting. That progressed to constant headaches and sinus problems, with my vision getting progressively worse.

The Telegraph

Antiques Roadshow's Theo Burrell has given an update on her terminal cancer diagnosis (Picture: BBC / Callum Lawrence)

Antiques Roadshow star Theo Burrell has shared a health update after being diagnosed with incurable brain cancer.

The 36-year-old, who joined the long-running BBC series in 2018, revealed in June that she had been diagnosed with 'an incurable aggressive grade 4 brain tumour' last year following the birth of her son.

The ceramics expert, who has since undergone 'surgery, radiotherapy and chemotherapy to keep the cancer under control,' was given just two years to live, and was told that her 'tumour will return and kill me'.

Theo, from Edinburgh, previously said the diagnosis left her 'devastated', coming when her son Jonah was just a year old.

However, she's now shared some positive news on social media after receiving some scan results for the grade four brain tumour – known as a Glioblastoma Multiforme (GBM).

Posting a selfie blowing a party horn while giving a thumbs up, she wrote: 'Good news! Another stable scan under my belt.'

Feb. 2024 – Melbourne, Australia – 27 year old Tahlia West had a “never-ending stream of migraines” – she was finally diagnosed with a rare brain tumor in the pituitary.

Tahlia West was turned away from medical professionals time and again when she complained about her array of painful symptoms.

She had chronic dizziness, fatigue, a declining memory, and a never-ending stream of migraines - yet the best diagnosis doctors could come up with was a persistent ear infection.

But after going back and forth with specialists for almost a year, Tahlia finally received a diagnosis: a rare pituitary tumour called a Rathke Cleft Cyst was pressing on the base of her skull.

It is incurable but she will be okay if the tumour doesn't grow. If it does, there's nothing she can do about the resulting symptoms.

The 27-year-old therapist from Melbourne revealed that she is sometimes overcome with such extreme fatigue that she falls asleep in the middle of a task.

'I always feel a lot of pressure inside my head,' Tahlia told FEMAIL. 'It's like someone has wrapped elastic bands around my skull and they're too tight.'

Nov. 6, 2023 – Liverpool, UK – The Night Café Indie lead singer 26 year old Sean Martin died suddenly Nov. 6, 2023. His girlfriend revealed that he had been suffering migraines.

Oct. 2023 – 33 year old Safa Srour, Dubai based beauty and fashion influencer was jet-setting between international fashion weeks when she had migraines. She was diagnosed with a brain aneurysm.

# Woman, 33, had migraine symptoms. Doctors found a brain aneurysm: 'I was terrified'

Safa Srour walked away with a diagnosis she didn't expect.

Safa Srour, 33, a Dubai-based beauty and fashion influencer, was jet-setting between international fashion weeks when she noticed sudden vision changes. Out of nowhere, she saw a zig-zag line appear in her vision.

"That was really scary because I never had it before in my life," [Srour](#) tells TODAY.com. She went to the doctor, who told her she would need bloodwork and an MRI, but she was about to leave for another fashion week trip, so she put it on hold.

Six weeks later, in October 2023, she came home and immediately experienced the same symptoms. This time, however, she also had numbness on the right side of her body. Remembering what her doctor told her previously, she rushed to get an MRI.

"I leave the hospital, and they call me to tell me to come right back," she recalls. "I knew (it was) nothing good."

Srour went back in. While doctors eventually determined her symptoms were due to a [migraine aura](#), the MRI had picked up something else: a [brain aneurysm](#).

Sep. 3, 2023 - Sep.3, 2023 - Biloxi, MS - 21 year old Alesia Lockhard is in US National Guard Reserve. In May 2023 after weeks of suffering from chronic migraines & nausea she was diagnosed with Stage 3 Rhabdomyosarcoma.

## 21 Year Old Battling Stage 3 Cancer

Alesia Lockhart is organizing this fundraiser.

She was a young woman on her way to a productive life and at this young age she very well should have been. Directly after graduating high school, she enlisted in the U.S. National Guard Reserve where she has now been placed on medical leave.

In May 2023 after weeks of suffering from chronic migraines, severe nausea and whole body pain she was diagnosed with Rhabdomyosarcoma. Rhabdomyosarcoma is a rare type of cancer that forms in soft tissue or sometimes hollow organs. It can occur at any age, but it mostly affects children. Soon after, she started intense chemotherapy at Ochsner Pediatric Cancer Center of New Orleans, Louisiana. After rounds and weeks of treatment,

Sep. 2023 - UK - 45 year old Pippa Griffiths, photographer, developed migraines, due to an undiagnosed meningioma.

## The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

*“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”*

### Reviews

*This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon*

*In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky's book is a rock upon which to sustain our fight. -Dr. Emanuel Garcia*

*In fifteen concise science-based chapters, Michel traces the false covid pandemic,*

*explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists.*  
—Peter Koenig

*Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy.* –David Skripac

*A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global coup d’état under way called “The Great Reset” that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it’s too late. You will not find so much valuable information and analysis in one place.* –Edward Curtin
