

Morocco - Earthquake Preceded by Mysterious Blue Lights

Result of Environmental Modification Techniques (ENMOD)? Reminiscent of Turkey's Blue Light Phenomenon - Previous to one of History's Most Devastating Seismic Events

On 8 September 2023, a devastating 6.8 (richter) earthquake hit Morocco, mostly the Atlas region, killing more than 3,000 people, affecting more than 100,000 children according to UNICEF, and leaving thousands of people still missing within the heaps of seemingly endless rubble.

"Large lightening appears before the earthquake in Morocco with unknown causes".... So says a brief Twitter message by Aprajita Choudhary, followed by a 9-second video clip.

📷📷📷📷 - Once more, reports of enigmatic blue lights have surfaced, preceding seismic events in the land of Morocco. A similar phenomenon was witnessed earlier this year in Türkiye, mere moments prior to earthquakes striking both Türkiye and Syria. pic.twitter.com/V7Ht2Xq3qp

— Aprajita Choudhary 🇮🇳 (@aprajitanefes) [September 13, 2023](#)

Aprajita further comments:

"Once more, reports of enigmatic blue lights have surfaced, preceding seismic events in the land of Morocco. A similar phenomenon was witnessed earlier this year in Turkey, mere moments prior to earthquakes striking both Turkey and Syria."

See this 3-minute clip – blue lights followed by devastating quake.

The *Daily Mail* also talks about mysterious lights just seconds before Morocco's horrifying tremor hit. Speculations about the origins of the lights abound.

Geologists say the 6.8 magnitude quake was the biggest to hit the heart of Morocco in more than 120 years. See [this](#).

Strange, hardly anybody from the "official" mainstream media likens it to the Turkey / Syria seismic event on 6 February 2023 (7.8 magnitude), of which a great number of seismologists and scientists strongly suspect it was a manmade - HAARP technology applied - phenomenon. HAARP stands for *High-frequency Active Auroral Research Program* which is linked to the US Air Force.

According to [HAARP's own website](#), the program was conceived as

"A scientific endeavor aimed at studying the properties and behavior of the ionosphere." And, "HAARP is the world's most capable high-power, high-frequency transmitter.... The program is committed to developing a world-class ionospheric research facility...."

The ionosphere stretches roughly 80 to 640 km above Earth's surface, right at the edge of space. Along with the neutral upper atmosphere, the ionosphere forms the boundary between Earth's lower atmosphere — where we live and breathe — and the vacuum of space. ([NASA](#))

Weather and climate phenomena are initiated at extreme - invisible - altitudes, before they play out in our life-sustaining atmosphere.

The Turkey / Syria quake death toll amounts to more than 60,000, with over half a million injured, and an area of some 350,000 km² - about the size of Germany - damaged.

See also [this](#).

HAARP, as the most powerful high-frequency transmitter, has developed electromagnetic laser-type beam capacities that can be shot from satellites deep under the earth's surface and cause high-magnitude earthquakes. [See this](#) for explanation on the functioning of HAARP / ENMOD (Environmental Modification) technologies.

ENMOD methodologies are also used to modify the world's climates, producing weather extremes - droughts, torrential rains, floods, prolonged and disproportionate monsoons, as well as destructive hurricanes, tornados, and devastating snow and ice storms and more — all to make believe the *Club of Rome* established narrative (see "Limits to Growth" - 1972) of "climate change" is real, and the consequences of destroyed infrastructure, crops, food shortages, leading to famine, misery and death are "normal" calamities of much propagated man-generated CO₂-caused "climate change".

The climate change we are living for the last few years has nothing, but nothing, to do with CO₂. In fact, the world needs more CO₂ to sustain life, as it is food for trees which convert CO₂ into oxygen - the support for all life on earth. Cutting down trees, especially rainforests, is reducing CO₂ absorption and oxygen production.

The HAARP precursor and analogy to Turkey may be relevant for the Morocco earthquake.

In Morocco, the tectonic activity primarily involves the convergence of the Eurasian and the Nubian (African) plates. The Eurasian Plate pushing against the Nubian Plate. This led to the formation of the Atlas Mountains some 80 million years ago. The Atlas Mountain chain runs through Morocco, Algeria, and Tunisia. See [this](#).

Speculations have it that the African tectonic plate may have moved north and collided with the Eurasian plate, causing the magnitude 6.8 earthquake in Morocco last week. It would be a rare occurrence, a remote possibility, because this 8 of September seism is by far the strongest registered in the region for the last 120 year. No pre-tremors, typical for larger seismic events, were registered.

If indeed ENMOD foul play is the cause, the purpose of targeting the Atlas fault may be thought to strengthen the belief of a “natural quake”, since the tremendous Turkey / Syria tremor took place far from any fault line; a fact that triggered scientists’ suspicions.

The Morocco seism literally split an [Atlas] mountain in two, an extremely atypical occurrence for an earthquake. See this mini-clip (38 seconds).

There is no proof yet that HAARP and possibly other ENMOD techniques were applied to cause the Morocco disaster. But suspicions grow and may soon be reaching overwhelming proportions.

The obvious question arises, why would Morocco be the victim of a manmade wanton colossal disaster, like this 6.8 killer-earthquake?

Could it be because in January 2022, Morocco was the first North African country to sign an agreement with China’s Belt and Road Initiative? Now, Morocco’s long-standing pro-U.S. affiliation is at a crossroads as Morocco has turned to China because of the potential for economic development from foreign investments.

The United States needs to reaffirm its support for the Moroccan government by increasing investments, maybe with some coercion, to maintain the political partnership. If not, Morocco may pivot to China and the Chinese government may use Morocco as a starting point for Chinese influence in North and Western Africa. This could well be Washington’s thinking.

Morocco is also of strategic importance to China, Europe, and the US, because of its access to the Mediterranean, the Atlantic, and the African continent. But also due to her growing energy sector, which has expanded in the wake of the Russian invasion of Ukraine.

See [this](#).

Morocco has exceptional resources of wind and solar energy on land, and possibly even more potential for the development of offshore wind energy. Investing in this potential will place Morocco among the ranks of the largest clean energy-producing countries, a feast for the Green Movement freaks.

However, maybe more importantly, Morocco also has sizable shale oil deposits at Timahdit and Tarfaya in the Atlas Mountains. Exploitation of these deposits has so far not been undertaken due to the depth of the deposits and related cost factors.

Shale oil is a hydrocarbon resource, bound up tightly in impermeable rock, and requires hydraulic fracturing to be extracted. A seismic event could replace hydraulic fracturing, breaking the rock, making the oil easier – and cheaper – to exploit.

Morocco has significant Shale Oil resources, ranked sixth in the world. Reserves are estimated at more than 53 billion barrels of oil, including 22 billion barrels in Tarfaya, and 15 billion barrels in Timahdit. The two areas, Tarfaya and Timahdit, are located in the Atlas Mountain region. See [this](#).

Could the deadly quake be a punishment *cum* warning, as well as providing for easier access to Morocco's enormous shale hydrocarbon resources? Reminiscent of the 2010 Haiti killer earthquake, from which Haiti has yet to recover? Haiti has substantial offshore shale oil reserves.

Naturally, most people – the populace at large – cannot believe that such evil originates from the people pretending running the world, but are plainly killing mankind. There is a natural rejection in every normal acting and thinking human being of the idea that we, humans, have been believing and trusting in our governments, in what we call “our authorities”, while they deceived us all along – maybe for centuries.

It is now dawning.

The monstrosities against humanity, caused by a relatively small elitist death cult, are beyond humankind's imagination. “They” know it. It is a smart, studied-for-decades, *Tavistock Institute* “Social Engineering” strategy, allowing them to continue fooling the people – see [this](#).

In the end, it is all “climate change”, stupid!

Let us stop being stupid.

Let us start thinking and acting for ourselves, for *Us the People*, thinking and living independently, as free human beings, no longer trusting in governments, in so-called authorities, or in bought and corrupted “science”.

It is not easy. But WE MUST – if we want to save humanity and support our civilization to survive.

We MUST steer free from all that is being imposed upon us – such as total control, digital enslavement, digitization of everything, including programmable digital money, transhumanism, the Woke-craze-crime, and much more.

We MUST resist and move out of the matrix – and start our own lives on a new independent blank plane.

No regrets – looking forward into the light.
