Paul Brodeur, a former staff writer for the New Yorker magazine, died on August 2, 2023. He was the author of the pioneering book, The Zapping of America, which he published in 1977. It was the first book I ever read on the subject of microwave radiation. Nobody had cell phones at that time. The first personal computers did not come on the market until that year. But Brodeur had bought property on Cape Cod, which he discovered was going to be directly in the path of the most powerful radar facility in the world.

It was an early warning radar station, and the United States was building two of them, one on the east coast and one on the west. They were called PAVE PAWS (Precision Acquisition of Vehicle Entry Phased Array Warning System).

They were going to emit 3-billion-watt phased array microwave beams that would scan the entire east and west coasts of the country to detect and warn against nuclear missiles. Brodeur did an investigation, and what he discovered about microwave radiation, and what was about to happen to this country, astonished him. Those radar stations were built and are still in operation today. And most people have forgotten they are there. But they emit phased array microwave radiation just like 5G cell phones and antennas.

In 1989, Brodeur wrote another book titled *Currents of Death: Power Lines, Computer Terminals, and the Attempts to Cover Up Their Threat to Your Health*. Computer screens were causing asthma, cataracts, miscarriages, birth defects, and skin problems. Until 1977, when the first personal computers were sold, rates of asthma had steadily declined year after year in the United States. In 1977, rates of asthma suddenly started to rise, and have been rising ever since. Brodeur exposed the hazards of computer screens in 1989. Most people have forgotten this too.

A new global network of local chapters called *People Without Cell Phones* has been launched to make sure that Brodeur's life and work, and the lives and work of other pioneers of his generation, were not in vain. Today, 46 years after *The Zapping of America* was published, the world is still pretending that radiation is harmless, and that asthma, and brain tumors, and diabetes, and heart disease, and cancer, are caused by something else. And everyone carries around a cell phone, day and night.

We are going to grow a worldwide network of people who are throwing them away. The Earth is dying. Insects have largely disappeared.

Birds are falling dead out of the sky by the millions. The purpose of this network is not to place blame. It is to establish a presence in this world of people living, and teaching others how to live, as if life on Earth will continue. It has been launched together with a [Policy Brief on Electrosmog](#), to which so far 29 organizations in 10 countries have signed on in support — organizations in the United States, Canada, the United Kingdom, France, Spain, Switzerland, Sweden, Norway, Belgium, and Tunisia. The time for baby steps is over. It is time to do what is necessary without fear, without reservations, and without accusations.

The New Mexico chapter of People Without Cell Phones had its founding meeting, in person, three days ago, on August 19. It was attended by a medical doctor, several building biologists, a photographer, and others. All but two do not own cell phones, and the others plan to get rid of theirs.

We established a feeling of community which people have been hungering for, and we began to discuss ways to talk about this to others, support one another, and work toward a world with:

- no more radiation
- no more brain tumors
- restored health and vitality
- birds, bees and butterflies
- living as if life on Earth will continue
