[Global Research Wants to Hear From You!](#)

“I think bird flu is going to be the cause of the great pandemic – where they’re teaching these viruses to be more infectious for humans,” he said.

Dr. Robert Redfield, the former Director for the Centers of Disease Control and Prevention (CDC) under the Trump Administration, recently divulged in an interview for the third time publicly that he believes bird flu will be seen as the “great pandemic,” attributing it to a lab-leak from gain-of-function escape from a laboratory.

Redfield expressed his viewpoint in a [short interview with Newsweek](#) on April 8th, talking about new supposed allegations in the quest to discover the true origins of Covid-19. Unlike his counterpart Dr. Anthony Fauci, who has supposedly disagreed and quarreled with Fauci on different occasions, Redfield has argued with Fauci on the origins of Covid-19 and how to treat it. Redfield very early on claimed Covid-19 was the result of gain-of-function experimentation that leaked from a lab.

Near the end of the interview, Redfield shifted his attention towards bird flu and the current spread that’s going on right now. Redfield said:

“Right now, it takes five amino acid changes for it to be effectively infecting humans. That’s a pretty heavy species barrier – but this virus is already in 26 mammal species, as you most recently saw cattle. But in the laboratory, I could make it highly infectious for humans in just months.”

Redfield warned that he believes bird flu will become the “great pandemic” because of lab manipulation to make it more infectious for humans.

That’s the real threat. That’s the real biosecurity threat that these university labs are doing bio-experiments that are intentionally modifying viruses – and I think bird flu is going to be the cause of the great pandemic – where they’re teaching these viruses to be more infectious for humans.

He said, though the interviewer did not follow up on his remark.

This is not the first time Redfield has been vocal in affirmatively saying he believes bird flu will be the next pandemic.

In 2022, [The WinePress cited an interview](#) appearance on the Trinitarian Broadcasting Network (TBN) where Redfield warned bird flu would be the next great pandemic, with a lethality of 10-50%, warning that the government needs to make preparing for this the number one priority.

Yeah I think we have to recognize – I’ve always said that I think the Covid pandemic was a wakeup call. I don’t believe it’s the great pandemic.

I believe the great pandemic is still in the future, and that’s going to be a bird flu pandemic for man. It’s gonna have significant mortality in the 10-50% range. It’s gonna be trouble.

And we should get great prepared for it. I do believe the pandemic risk is a greater risk of the national security of the United States more than [North] Korea, China, Russia, Iran; and we ought to start investing proportional to that national security risk so that we’re prepared.

Unfortunately we’re not more prepared today than when the [Covid-19] pandemic, when I was [the] CDC Director. And we need to make proportional investment so that we are prepared, not the least of which is enhancing our manufacturing capability.

So now that we have new technology like the mRNA technology: it’s great that I can make a vaccine in 2, 4, 6, 8 weeks. But it doesn’t help me if I can’t manufacture 330 million doses.

So, this is a serious issue. I don’t think our politicians are focused on the magnitude of this issue. This needs to be approached with a budgetary perspective measured in multiple aircraft carriers, not in the 5, 8, 10 million dollar budget we spend on public health on this nation.

Moreover, [in 2023 Redfield was even more adamant in an interview with The Hill](#), this time specifying that the ‘great pandemic’ of bird flu would be a result of gain-of-function escaping a laboratory.

I do believe the next pandemic, and we’re going to have another pandemic and I think it’s going to be the great pandemic. I consider Covid a minor pandemic, the great

pandemic's going to come.

And normally, it would come from spillover – bird flu that learns how to transmit to humans and then go to human-to-human. But I think the species barriers are very real.

But it's much more probable that it will happen because of gain-of-function research in a laboratory and then escape and then we're going to have a pandemic... which will be much more brutal to the world than Covid was.

I told you that the great pandemic is coming. I think it's gonna come not from spillover, it's going to come from gain-of-function research or intentional bioterrorism. Alright, it's going to be a bird flu virus that is manipulated to be able to transmit human-to-human, very similar to what we saw with Covid.

You know in 2014 that laboratory published that they finally learned to take their Covid virus, and have it bind to the H2 receptor and humanize mice, and therefore it could go human-to-human.

He said at the time.

Currently the mainstream media, and national and global health organizations have been incessantly warning about the spread of bird flu in meat and dairy, to other animals and people especially.
