An 'active' woman who was diagnosed with bile duct cancer aged just 23 has revealed the early warning signs that she ignored.

Sydney Towle, from California, received her diagnosis in early August after doctors discovered a 'sizable mass' in her stomach that had been growing for four months.

'I'm typically an active person but suddenly I started feeling short of breath, and this strange burning sensation took hold in my tummy,' she shared.

The young woman admitted that she had initially overlooked her symptoms and is now urging others not to skip their regular health checkups.

'After ignoring my symptoms, I finally decided to go to the doctor. They did an ultrasound, then an MRI and a biopsy,' Sydney explained.

'When I received those initial MRI results, and they pointed to a solid mass in my liver, I just knew it was cancer.

'I immediately called my family, tears streaming down my face. It took me quite a while to fully grasp the reality of my diagnosis.'

Bile duct cancer, also known as cholangiocarcinoma, is an aggressive type of cancer that starts in the bile ducts.

It can affect people of different ages but it is more commonly diagnosed in adults over the age of 50.

Sydney, whose tumor arose from a genetic mutation, admitted that the most challenging aspect of her journey has been dealing with the unknown.

'It's tough for me to plan for the future at all or expect anything when everything is so fragile around my diagnosis and treatment,' she said.

'It's also really hard to plan in the short term, such as dinners or going out with friends, when I don't know how I'll feel physically or emotionally on a given day.

'There are so many things I want to do now, given that I don't know how much longer I have, but I can't plan my bucket list or any fun trips while receiving treatment and not knowing where surgery will take me.'

Sydney is currently undergoing aggressive treatment targeting the tumor with a variety of treatments, including chemotherapy and experimental drugs.

'One thing I've continued doing throughout my treatment is staying active. I still enjoy like hot yoga, long walks, and surfing with friends,' she added.

'It's also helped me stay busy and keep my mind off my diagnosis.

'The oncology nurses at my chemo center are such a blessing. I am so grateful for their positive attitudes and smiles every time I go in for treatment.

'The Cholangiocarcinoma Foundation has been especially helpful in providing resources and connecting me with other young people around the world who are fighting bile duct cancer. It does help knowing I'm not alone.'

Sydney began documenting her cancer journey on TikTok, starting from the day she was diagnosed.

'I have always shared every part of my life on TikTok - it gives me a place to vent and share my emotions and hope that others can connect with me or be inspired somehow,' she said.

'This has taken a life of its own throughout my journey, as countless people have reached out with their personal stories and how they are inspired by my journey so far.'

Looking to the future, Sydney has big plans in mind.

'Australia and New Zealand are calling my name for starters, and I'll be checking off my bucket list like it's a to-do list - but it's not just about me,' she said.

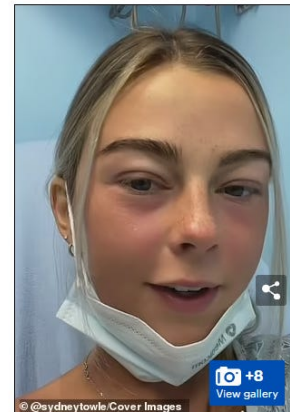

'I want to keep inspiring and helping others. Volunteering at a chemo center seems like a meaningful path.'

She advises others: 'Don't skip those regular healthcare check-ups, and never ignore any health concerns.

'I did that, assuming youth could shield me from serious issues, and it taught me a tough lesson.

'To my friends and followers, just be yourselves - no need to change because of my diagnosis.

'Let my journey inspire you to live life to the fullest and be as happy as you can be.'

Sydney began documenting her cancer journey on TikTok, starting from the day she was diagnosed

Sydney had an intrahepatic cholangiocarcinoma. (average age at diagnosis is 70).

The average age at diagnosis for people with intrahepatic bile duct cancer is 70. For extrahepatic bile duct cancer, the average age at diagnosis is 72.

By ELEANOR DYE

PUBLISHED: 11:44 EDT, 28 February 2024 | UPDATED: 03:45 EDT, 29 February 2024

A woman has announced her own death from **cancer** in a heartbreaking LinkedIn post in which she describes how she 'chose joy' in the final days of her life.

Daniella Thackray, 25, a HR professional from Leeds, had pre-written her thought-provoking final words for her family to post on her behalf after her death from a rare and aggressive form of bile duct cancer, also known as cholangiocarcinoma.

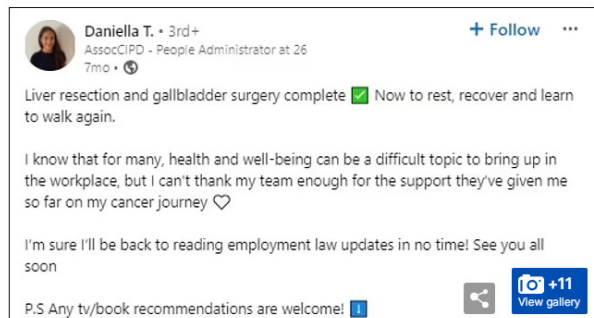

The post has since racked up nearly 35,000 likes as people were left moved by Daniella's positive outlook despite her tragic circumstances.

As she paid tribute to her family, fiancé Tom, and dog Leo, Daniella - who worked as a 'people administrator' at a digital marketing agency, encouraged her network to 'enjoy the little things' in life and 'cherish every moment'.

She wrote: 'If you're reading this then it means I have died from my battle with cancer and my family are posting my final message on my behalf.'

Daniella Thackray, from Leeds, had pre-written her incredibly thought-provoking final words for her family to post on her behalf

Daniella posted an update in her cancer battle seven months ago, also on LinkedIn, revealing she'd had a liver resection and gall bladder surgery

'And lastly to my dear, beautiful Tom, I love you and always will. Thank you for supporting me and bringing so much love and happiness into my life. Go enjoy your life now, you deserve it.'

Daniella had worked in HR at 26 since July 2022 and previously studied at Newcastle University.

In a post on her employer's Instagram, she described her role as onboarding new starters and supporting employees.

The music lover said her dream dinner party guests would be Adele and Dave Grohl and described how she loved football, eating out and spending time with loved ones.

She added that her three-year-old English setter Leo needed lots of walks and attention.

Seven months ago, Daniella posted an update in her cancer battle, revealing she'd had a liver resection and gall bladder surgery.

Daniella had an extrahepatic cholangiocarcinoma (average age at diagnosis is 72).

The average age at diagnosis for people with intrahepatic bile duct cancer is 70. For extrahepatic bile duct cancer, the average age at diagnosis is 72.

Bile Duct Cancer (Cholangiocarcinoma): Statistics

[Elyria, OH](#) - March 2024 - 33 year old Joseph "Joey" Manocchi was diagnosed with

cholangiocarcinoma. “Because the cancer tumor in his main common bile duct is advanced and very involved with the artery, it is not safely operable.”

Helping Joey to FIGHT Cholangiocarcinoma

Angie Piper is organizing this fundraiser on behalf of Joseph Manocchi.

We are fundraising for our little brother, Joey.

Joey is 33 years old and was diagnosed this March 2024 with cholangiocarcinoma (a very rare- aggressive bile duct cancer). Prior to him getting sick, he worked a full time night shift position and cared for his 3 children during the day.

Joey has always been a hard worker and prioritized his beautiful family (Kayla, Isabella, Liam & Giada).

HE IS SUCH AN AMAZING, ADMIRABLE PERSON.

Right now, because the cancer tumor in his main common bile duct is advanced and very involved with the artery, it is not safely operable. Its location also inhibits liver function. He does not currently meet strict and specific criteria for a donor liver transplant.

Plans right now, after second opinions and consults with specialists, is to first start chemotherapy and see if it is possible to shrink down the bile duct tumor- as long as the liver stays stable enough, the liver's needs will be addressed secondary.

So far he has had numerous testing, stents, strictures, biopsies, liver drains, and chemo port placement.

Josh, who is only 35 years old, was recently diagnosed with Cholangiocarcinoma.

Unfortunately, it's a very rare and aggressive form of cancer. His world, as well as ours, has forever changed. While we are still waiting for more test results and answers, one thing that is certain is Josh is about to begin a very extensive treatment plan with an intense chemotherapy/radiation schedule. We are seeking help with any donations to assist in paying for medical bills and cost of living expenses that he is facing. Josh is a fighter, and he will fight with everything he has to win this battle. His wife, Jessi and two daughters, who are 2 1/2 years old and 1 year old are his biggest motivators to beating this horrible monstrous disease. Any and all donations are very much appreciated. We want to thank you in advance for your love, support and generosity.

Melissa Sue (Licata) Neely, daughter of Tim and Bernice (Reuter) Licata, was born on May 4, 1987, in DeWitt, Iowa. She graduated from Boone High School in 2005. She went on to college at Des Moines Area Community College in Boone and Iowa State University graduating with a Bachelor of Science degree in Child, Adult and Family Services in 2009.

Melissa met the love of her life Justin Neely at a Pufferbilly Days Dance in 2004 and were married on August 9, 2014 in Boone. They have two daughters together. Melissa worked for Vision Bank in Boone as a loan assistant for the last ten years.

Melissa enjoyed spending time with her family and friends, especially her two daughters, tending to her garden and flowers, going for walks, watching Iowa wrestling with Justin and shopping for deals.

Melissa was diagnosed on March 17, 2023 with cholangiocarcinoma, a rare bile duct liver cancer, at the age of 35. Melissa passed away on Thursday, February 15, 2024, at the Israel Family Hospice House in Ames.

Melissa was preceded in death by her great-grandparents Myron and Lorain Hendericks; grandparents Karl and Beverly Licata and Michael and Edna Reuter; and dog Maverick.

Living family members include her husband, Justin and children, Madison and Olivia of Boone. Her parents, Tim and Bernice Licata (Platte City, MO);

[Aug. 16, 2023](#) – Syracuse, NY – 30s year old Ryan Wood was diagnosed with Stage 3B cholangiocarcinoma in March 2023.

Ryan Wood Cancer Treatment Fund

Ryan Wood is organizing this fundraiser.

Hello, I'm Ryan and in March 2023 I was diagnosed with a rare form of cancer called Cholangiocarcinoma or Bile Duct Cancer. My specific type is Stage 3b and only 3,000 people are diagnosed every year (the average age tends to be 70 and I have yet to find stats for people diagnosed before age 40).

It's been a long rollercoaster of surgery and multiple infections which has sent me back to the hospital numerous times in the last 5 1/2 months. I have pretty decent insurance, yet I'm still accumulating thousands of dollars in medical debt due to the hospitalizations and many trips to Upstate Cancer Center for follow-ups, labs, genetic testing, etc...

Currently I have had to delay continuing chemotherapy treatments due to a tendency to get bacterial infections from my biliary drain. These usually first appear as a fever accompanied by chills. For perspective, this has delayed my chemotherapy over 3 months now until my doctors can get things under control.

The surgery was very successful in removing the tumor that had spread into my liver, 2 lymph nodes and bile ducts. However some microscopic cancer cells remained in some of my bile ducts as the ducts were too small to remove or resect. Hence the need for chemotherapy and radiation treatments to make sure everything will be gone.

Unfortunately, the longer these delays go on the more at risk I am for relapsing.

Ryan says: "I have yet to find stats for people diagnosed before age 40."

[June 12, 2023](#) - Louisville, OH - 33 year old Bobby Courtney was diagnosed, in May 2023, with Stage 4 metastatic Cholangiocarcinoma as well as primary sclerosing cholangitis.

Help for Bobby Courtney's Fight against Cancer

Lynette Jobe is organizing this fundraiser on behalf of Katlyn Courtney.

This fundraiser is to help support Robert "Bobby" Courtney and his wife Katie (Karahuta) through his fight with cancer. They are new parent's to their son Asher who just turned 5 months old. I have known Katie since she was born, as her Mom is one of my oldest friends. I am starting this fundraiser in hopes to help her family with medical and living expenses so they can focus on Bobby's treatment.

Bobby has dealt with the diagnosis of Ulcerative Colitis, amongst other health conditions since 2008. In 2018, the Cleveland clinic located a 2cm precancerous polyp that was successfully removed in his transverse colon. His UC has been in remission since 2019, with the acceptance of occasional flare ups. In May of 2023 Bobby began vomiting. This isn't uncommon, he has frequent panic attacks and tends to vomit while having one. The vomiting lasted on and off for 2 weeks. They began communicating with his GI doctor at the Cleveland clinic, who ordered blood tests. They realized his liver enzymes were rising quickly and asked for him to come into the main campus ER. This is where he was diagnosed with acute pancreatitis with an unknown cause. He underwent an MRI where they found enlarged lymph nodes in the groin and by the kidneys, as well as small nodules on the perineum, thickening of the upper right portion of the liver, and a complete obstruction of a bile duct. At this point, Bobby became jaundice. They biopsied the retroperitoneal lymphnodes and confirmed he had stage 4 metastatic cholangiocarcinoma as well as primary sclerosing cholangitis (another autoimmune condition that people with ulcerative colitis can develop, that unfortunately can lead to liver failure/cancer). Bobby found out the news 3 days before his 34th birthday, which was also spent in the hospital. The current course of action is Chemotherapy, and we pray it works to kill or shrink the tumors in his body. He does not qualify for immunotherapy due to the ulcerative colitis. This is a very aggressive cancer with a long road of treatment ahead.

[May 10, 2023](#) - UK - 35 year old Chris McGinnis was diagnosed with Cholangiocarcinoma and was given 12 months to live. He died only 3 months after diagnosis.

Chris McGinnis Memorial Fund

Team fundraiser

Natasha Walker and Claire Kudryk are organizing this fundraiser.

After the sad news of our close friend, Chris', passing away on Wednesday 10th May 2023, we have set up this donation page to help support Mel and the girls the best we can.

Chris was tragically diagnosed with Metastasis Cholangiocarcinoma, an aggressive form of bile duct cancer, earlier this year. Doctors initially gave Chris a prognosis of up to 12 months but sadly he passed away 3 months after diagnosis. Just days before his passing, Chris married the love of his life Mel, they should have had so much more time as a family.

Chris was the funniest, naughtiest guy, who had a wicked sense of humour. He was an

My Take...

28 year old doctor Dr. Gareth Honeybone is a junior maxillofacial surgeon at Northern

General Hospital in Sheffield. He is COVID-19 Vaccinated. In February 2023 he was diagnosed with cholangiocarcinoma.

Being a doctor has helped Gareth Honeybone cope with his cancer diagnosis (Image: Gareth Honeybone)

'I have barely 2% chance of living but I'm determined to beat this cancer'

28 year old doctor Gareth Honeybone reveals why he's still laughing despite his diagnosis of deadly bile duct cancer

By **AMY PACKER**, Health Editor

16:16, Tue, Apr 30, 2024 | UPDATED: 17:22, Tue, Apr 30, 2024

"I've always been funny in quite a dry way," says Gareth, 28. "Even during my treatment I'd say things that people found funny, though slightly strange. I suppose it's my coping mechanism."

Gareth is well versed in being on both sides of the desk when it comes to breaking bad news to patients. **When he's not performing at comedy clubs, he's a junior maxillofacial surgeon at the Northern General Hospital in Sheffield.**

"At work I'm on the wards, in surgery or seeing patients in my clinic, many of whom may have mouth cancer," he says. "Then, only a few hours after leaving hospital, I'm trying to make an audience laugh about my own cancer experience. It's quite a contrast."

In November 2022, while having a regular blood test to monitor his Crohn's, doctors found a liver abnormality caused by a **blocked bile duct**. This turned out to be a rare chronic disease called primary sclerosing cholangitis, in which the body's own immune system attacks the bile ducts which connect the organs in the digestive system.

As Gareth's condition worsened, he became yellow with jaundice. **So in February last year he underwent what he describes as his "big operation".** During six hours of surgery, his bile duct, gall bladder and lymph nodes, along with other tissue and veins, were all removed before his bowel was rerouted. "My doctors suspected the bile duct blockage was caused by a cancerous tumour, so as a precaution they took everything out," says Gareth. "It was only later, once everything had been examined, that cancer was confirmed."

Gareth was diagnosed with **cholangiocarcinoma** (CCA) – also known as bile duct cancer – which is extremely aggressive and has a poor mortality rate of 97.4 per cent. If caught early, surgery is a potential cure. Following his surgery, he had six months of chemotherapy. Despite the gruelling treatment, he was back at work by July.

Gareth Honeybone's doctors suspected his bile duct blockage was caused by a cancerous tumour

I started the article with a 23 year old woman, and I'm ending the article with a 28 year old man. Both are dying from a disease where the average age is 70.

There are [13,146 Oncologists](#) practicing in the United States. Not one is speaking out. How is it possible for an entire medical specialty to implode and fail?

As a physician, when a 20 year old shows up in your office, dying from a disease that affects 70 year olds, you start asking questions. When 10 show up, you present at International Conferences and write papers about it.

COVID-19 mRNA Vaccines cause Turbo Cancer. This is one of the most obvious phenomena in medicine today. Cancers of the Biliary Tree are significantly increased in the COVID-19 mRNA Vaccinated population, for reasons currently unknown.

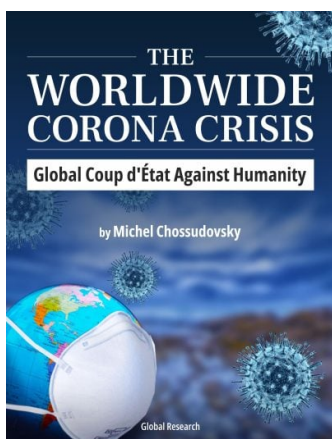

I don't know what's more frightening: the doctors who can't see this, or the doctors who do see it, but turn the other way and don't say a word about it.

The Worldwide Corona Crisis, Global Coup d'Etat Against Humanity

by Michel Chossudovsky

Michel Chossudovsky reviews in detail how this insidious project “destroys people’s lives”. He provides a comprehensive analysis of everything you need to know about the “pandemic” — from the medical dimensions to the economic and social repercussions, political underpinnings, and mental and psychological impacts.

“My objective as an author is to inform people worldwide and refute the official narrative which has been used as a justification to destabilize the economic and social fabric of entire countries, followed by the imposition of the “deadly” COVID-19 “vaccine”. This crisis affects humanity in its entirety: almost 8 billion people. We stand in solidarity with our fellow human beings and our children worldwide. Truth is a powerful instrument.”

Reviews

This is an in-depth resource of great interest if it is the wider perspective you are motivated to understand a little better, the author is very knowledgeable about geopolitics and this comes out in the way Covid is contextualized. —Dr. Mike Yeadon

In this war against humanity in which we find ourselves, in this singular, irregular and massive assault against liberty and the goodness of people, Chossudovsky's book is a rock upon which to sustain our fight. -Dr. Emanuel Garcia

In fifteen concise science-based chapters, Michel traces the false covid pandemic, explaining how a PCR test, producing up to 97% proven false positives, combined with a relentless 24/7 fear campaign, was able to create a worldwide panic-laden “plandemic”; that this plandemic would never have been possible without the infamous DNA-modifying

Polymerase Chain Reaction test – which to this day is being pushed on a majority of innocent people who have no clue. His conclusions are evidenced by renown scientists.
—Peter Koenig

Professor Chossudovsky exposes the truth that “there is no causal relationship between the virus and economic variables.” In other words, it was not COVID-19 but, rather, the deliberate implementation of the illogical, scientifically baseless lockdowns that caused the shutdown of the global economy. –David Skripac

A reading of Chossudovsky’s book provides a comprehensive lesson in how there is a global coup d’état under way called “The Great Reset” that if not resisted and defeated by freedom loving people everywhere will result in a dystopian future not yet imagined. Pass on this free gift from Professor Chossudovsky before it’s too late. You will not find so much valuable information and analysis in one place. –Edward Curtin
