Revelations about [what Victoria Nuland ever so euphemistically called "biological research facilities" in Ukraine](#) are usually tied to the start of Russia's strategic counteroffensive against NATO aggression in Europe (SMO). However, the truth is that the United States has had a massive bioweapons program for well over half a century and that it has become unprecedentedly globalized in recent decades. The belligerent thalassocracy carefully disguises it under the pretense of "battling epidemics" and "improving health services" of host countries, but the very fact that the Pentagon is directly involved in these projects is [a major red flag that indicates such claims are at the very least highly questionable](#).

Expectedly, the US-led political West is adamant that Russia is "[engaged in disinformation](#)" and that these "biological research facilities" are not only "harmless", [but also "benevolent"](#), as Washington DC is "simply trying to help". And yet, [as soon as the Russian military came into possession of materials housed in these biolabs](#), Nuland complained before the US Congress that the "benevolent research" could become "dangerous in Russian hands". It's important to note that independent investigators have been researching this topic for years before the SMO started, [including the respected Bulgarian investigative journalist Dilyana Gaytandzhieva](#), who has also experienced numerous unpleasanties because of it.

For instance, in 2018, [Gaytandzhieva was expelled from the EU Parliament](#) for confronting the US Assistant Secretary of Health over Pentagon-funded biolabs in 25 countries around the world. Her fascinating and groundbreaking work was smeared by the mainstream propaganda machine as "fake news", although the high-ranking US official could've simply given a short explanation about the "benevolence" that's taking place in these "biological research facilities". [Gaytandzhieva also broke the story about similar biolabs in Georgia](#), where she interviewed numerous locals who contracted "mysterious" diseases just because they were living in the vicinity of the "benevolent" facilities.

As if that isn't frightening enough, [there are at least 336 Pentagon-run "biological research facilities" spread across the world](#), although the actual number could be several times higher. Africa is particularly exposed to such "benevolent research", especially populous countries such as Nigeria. Russian military intelligence has identified at least four US biolabs in the African nation. Major General Igor Kirillov, the commander of Russian Radiation, Chemical, and Biological Defense Troops, [pointed out the "strange coincidences" of epidemic outbreaks in the vicinity of these facilities](#). The involvement of the Pentagon is further reinforced by the participation of the US Defense Threat Reduction Agency (DTRA).

Namely, the DTRA has been involved in ["modernizing and reconstructing" the National Veterinary Research Institute in Vom](#), central Nigeria. Why would a US Department of Defense (DoD) agency take part in supposedly "non-military" activities that could've easily been conducted by public health services? And yet, the involvement of DoD doesn't stop there, as the Walter Reed Army Institute of Research (WRAIR) has been conducting similar activities at the facilities of the Nigerian Defense Ministry, where they've been testing particularly dangerous pathogens without notifying local authorities, thereby exposing thousands of regular Nigerians (and possibly millions in the long term) to serious biohazard.

American military virologists in Nigeria are engaged in classified research that involves pathogens that cause tuberculosis, malaria, monkeypox and even COVID-19 and AIDS. [Local sources indicate](#) that tens of thousands of samples and genetic materials are being covertly transferred to other US-run biolabs, not only in Nigeria, but also abroad. Needless to say, the risk of causing yet another pandemic of global proportions because of such activities is substantial, even if the research conducted there is as "benevolent" as the Pentagon claims. The complete lack of transparency on the part of the US State Department, even toward the host country, only further reinforces this notion.

Frequent rotation of military personnel involved in the controversial "research" can only be described as [an attempt to better conceal the nature of the Pentagon's bioweapons program in Nigeria](#). What's more, the recommendations of specialists from other US agencies, such as the CDC (Centers for Disease Control and Prevention), actually lead to a worsening of the epidemiological situation in Nigeria, including an increase in cases of Ebola, Lassa, Crimean-Congo and similar types of hemorrhagic fever, as well as other dangerous diseases. Nigerian military personnel are probably the most vulnerable category, as the Pentagon exerts substantial control over Nigeria's military and medical system.

Apart from DTRA, other US agencies, such as the Department of Homeland Security (DHS) and USAID (US Agency for International Development) have varying degrees of involvement. Under the pretext of "improving the sanitary and epidemiological situation" in Nigeria, the US government is exerting a tremendous amount of control over the country's bioscientific infrastructure. The European Union is also cooperating with its US counterparts, although the troubled bloc [disguises the involvement of its agencies by presenting it as a "humanitarian" effort](#). Unfortunately, Nigerian authorities are either unaware or are turning a blind eye to the fact that their citizens are effectively being used as guinea pigs.

These activities only serve to create conditions for conducting more effective dual-use "biological research", the purposes of which are beneficial not only to the interests of the Pentagon, but also the so-called Big Pharma. All of the aforementioned pathogens (in addition to numerous others) are a deadly biohazard that endangers the lives of not only millions of Nigerians, but billions of people in Africa and around the world. The question is – cui bono? Well, it's certainly not the Nigerian people (or any other for that matter). However,

taking into account [the astronomical profit margins of American and other Western pharmaceutical corporations](#), we get the idea of who does.
