

Vaccines: “Just Get Your Damn Shots”

By [Dr. Gary G. Kohls](#)

Global Research, January 28, 2024

Region: [USA](#)

Theme: [Media Disinformation](#), [Science and Medicine](#)

Incisive article by Dr. Gary G. Kohls first published by Global Research on August 1, 2017, more than three years prior to the launching of Covid-19 in December 2020.

The title above “Just Get Your Damn Shots” is a verbatim quote taken from any number of seriously uninformed TV physicians, paid trolls and paid celebrities as they have gleefully joined the popular CDC, WHO, AAP, AAFP and AMA-sponsored campaigns that have denigrated (and therefore infuriated) the witnesses of the hundreds of thousands of over-vaccinated, vaccine-injured, vaccine-disabled or vaccine-killed infants, children, adults and soldiers.

Particularly angered are the parents, siblings, neighbors and other loved ones of the vaccine-traumatized victims, for they

KNOW FOR CERTAIN THAT THE VACCINES POISONED THEIR LOVED ONES BECAUSE THEY SAW WHAT WAS HAPPENING BEFORE THEIR VERY EYES.

Dear Readers, Google the title: “Just Get Your Damn Shots” Prevails.

Draft Google Search (January 27, 2023)

"just get the damn vaccine

These witnesses knew the truth, even though their physicians (especially, apparently, pediatricians) and their clinics refused to listen to them and often fired them and their families when they logically refused to accept "coincidence" as the reason for the catastrophic vaccine-induced illness that suddenly changed their normal baby into a chronically ill or dead one.

Well-informed parents are beginning to realize – despite the aggressive propaganda campaigns from Big Pharma, Big Medicine and Big Media – that vaccines are NOT necessarily safe. Indeed they are seeing that they can be lethal.

Many parents are also beginning to see that vaccines are NOT necessarily effective long-term either. As opposed to natural childhood infections giving life-long immunity, vaccines for such mild infections as measles, mumps and chickenpox need frequent booster shots to theoretically provide partial immunity.

Parents who can't expect to get thorough information about the CDC's and AAP's over-

vaccination mandates from their clinics are having to do their own research on neurotoxicology , and they are beginning to realize (no thanks to their too-busy and relatively un-informed physicians) that the vaccines that are planned for their precious kids contain varieties of neurotoxic ingredients in the cocktails of baby shots. As many as 3 injections at one sitting are supposed to go into the tiny muscles of 6 or 8 or 10 pound babies at their 2, 4 and 6 month well baby check-ups. These injections may contain live viruses, aluminum, mercury or unintended contaminants all of which the vaccine manufacturers admit may cause brain inflammation or infection.

The most brain toxic vaccine ingredient in this era since the year 2000 is aluminum, which is increasingly in many infant vaccines. The most brain toxic metal that was in vaccines in the latter two generations of the 20th century was mercury (thimerosal) – a preservative that was removed from many vaccines around 2000 because pediatricians KNEW that it was the major cause of the pediatric autism spectrum disorder (ASD) epidemic that had no other plausible explanation.

Because of that knowledge, the AAP (the American Academy of Pediatrics that now infamously denies the connection between vaccines and ASD), with no help from the CDC, eventually helped convince the vaccine manufacturers to remove mercury from most vaccines.

Babies, most notably the premature ones, always have immature, leaky blood-brain barriers (and leaky guts) that allow some of these toxic vaccine ingredients to enter the brain. Both aluminum and mercury – even in “trace” amounts – are known to adversely affect both the blood-brain barrier and the placental barrier, with serious implications for pregnant women who are increasingly prompted to submit to expensive and probably fetotoxic vaccinations.(!).

Paid Trolls are Behind Much of the Smearing of the Vaccine-injured

The ubiquitous smear campaigns against what paid trolls pejoratively call “anti-vaxxers” target any and all rational and scholarly skeptics of America’s blatantly over-vaccination agenda – a American national agenda that

- 1) over-vaccinates the most children in the entire developed world,
- 2) has the worst infant mortality rate in the entire developed world and
- 3) has the largest percentage of autistic kids in the entire developed world.

But Big Pharma’s toxic over-vaccination agenda is highly profitable for

- 1) Big Pharma,
- 2) Big Medicine,
- 3) pediatricians,
- 4) medical clinics and
- 5) Big Media (which makes billions of dollars per year from Big Pharma advertisers).

The propagandistic smear has been orchestrated by organizations (and their paid trolls) representing the 5 corporate institutions named above, who are drafting laws to make more and more of these toxic vaccines compulsory, as has happened in California in 2016. Even Big Pharma-bribed politicians – all totally ignorant of the neurotoxicology of America’s over-vaccination agenda – are joining the irrational campaign.

What is saddest is how vicious have been the attacks against the independent, non-pharma scientist-scholars who have actually done well-designed toxicology research that PROVES (to any unbiased physician or otherwise smart person that isn’t conflicted and immobilized by financial or professional conflicts of interest) that what the CDC and AAP is saying about vaccine safety is untrue.

Sadly, every major media outlet seems to employ attractive, highly indoctrinated, financially- and professionally-conflicted full-time celebrity physicians to only report on medical issues that are favorable to the network’s Big Pharma advertisers. Therefore no news will be effectively reported that might expose any of Big Pharma’s many blatantly fraudulent practices.

Don’t Criticize What You Can’t Understand

And then there are ignorant celebrities who have joined the well-financed and well-organized smear campaign who know nothing about the science of vaccine neurotoxicology, a science that proves beyond a shadow of a doubt that intramuscularly-injected aluminum (which is in most infant vaccines as an “adjuvant” – look it up) and intramuscularly-injected mercury (thimerosal) are common causes of childhood brain damage that can be diagnosed as Autism Spectrum Disorder (ASD), Asperger’s Disorder, Attention Deficit Hyperactivity Disorder (ADHD), Autoimmune/inflammatory Syndrome Induced by Adjuvants (ASIA), Autoimmune Disorders, Amyotrophic Lateral Sclerosis (ALS), Allergies (and that’s just the list of vaccine-induced disorders that start with the letter “A”), tic disorder, seizure disorder, dementia, Parkinson’s, multiple sclerosis, etc, etc, depending on what age the brain was sufficiently poisoned and what location in the brain was most seriously affected.

The sad reality is that most physicians (including my own) had woefully inadequate medical school training about neurotoxicology, immunology, vaccinology and nutrition, at least partly because Big Pharma has devious influences on medical education – hoping to create endless supplies of prolific prescription-writers and vaccine supporters.

A couple of years ago, prior to his pregnant wife (highly likely) receiving her mercury-laden prenatal flu shot and her aluminum-laden prenatal DTaP shot, ABC’s Jimmy Kimmel chimed in with the CDC/AMA/AAP’s “just get your damn shots” campaign that demonized

- 1) parents and loved ones of vaccine-injured babies and children,
- 2) unbiased research immunologists,
- 3) unbiased neurotoxicologists,
- 4) the 10 – 15% of pediatricians who actually listen sympathetically to their patients, and
- 5) other scholarly and critically-thinking science-minded folks who know that toxic

vaccine ingredients commonly sicken many of America's over-vaccinated children.

Knowing that the most common neurotoxic vaccine ingredients (aluminum and mercury)

- 1) are both mitochondrial toxins,
- 2) are both blood-brain barrier toxins,
- 3) are both capable of crossing the placental barrier and
- 4) are both exponentially more poisonous when given together,

it shouldn't surprise any logical thinker that bad outcomes should be expected when metal-containing vaccines are given in cocktails at the same time, whether they are given to a soldier, a baby, a child, a pre-pubertal girl or an adult heading towards dementia.

Quotes

I conclude with some appropriate quotes that should give some uncertain or blind pro-vaccinators pause and give them interest and the willingness to go to the massive volume of unbiased medical literature to learn the truth about the dangers of over-vaccinating children.

I don't expect changing the minds of those who have been indoctrinated by Big Pharma and Big Medicine. I also don't expect influencing paid or unpaid trolls to actually go to the many references and scholars that I have referred to in the past. You can lead a horse to water but you can't make him drink. And you can point out the conflicts of interest of the ignorant naysayers and trolls but that won't stop them from continuing to criticize the science that they are either incapable of understanding or unwilling to listen to.

"You might as well consult a butcher on the value of vegetarianism as a doctor on the worth of vaccination." – George Bernard Shaw

"It is difficult to get a man to understand something, when his salary depends upon his not understanding it!" – Upton Sinclair, American anti-fascist, anti-imperialist author

"No vaccine manufacturer shall be liable...for damages arising from a vaccine-related injury or death." – President Ronald Wilson Reagan, as he signed **The National Childhood Vaccine Injury Act (NCVIA) of 1986**, absolving drug companies, pediatricians and all vaccine providers from all medico-legal liability when children die, become chronically ill with vaccine-induced autoimmune disorders or are otherwise disabled from vaccine injuries. (That law has led directly to an expected reckless, liability-free development of scores of new, over-priced, potential block-buster vaccines, now numbering over 250. The question that must be asked of Big Medicine's practitioners: How will the CDC, the AMA, the AAFP and the American Academy of Pediatrics fit any more potentially neurotoxic vaccines into the current well-baby over-vaccination schedule?)

"By Nov. 1, 2016, \$3.5 billion had been awarded to more than 3,500 vaccine victims through the federal vaccine injury compensation program (VICP) created under the 1986 NCVIA law."

“When a well-packaged web of lies has been sold gradually to the masses ... the truth will seem utterly preposterous and its speaker, a raving lunatic.”—
Dresden James

“In a time of universal deceit, telling the truth is a revolutionary act.” – George Orwell

Is the Childhood Vaccine Schedule Safe?

1976: 1 child in 30 was learning disabled → 2013: 1 child in 6 is learning disabled.

1980: 1 child in 27 had asthma → 2013: 1 child in 9 has asthma.

1992: 1 child in 500 developed autism → 2013: 1 child in 50 develops autism.

2001: 1 child in 555 had diabetes → 2013: 1 child in 400 has diabetes.

THREE TIMES AS MANY VACCINATIONS FOR CHILDREN

1953: CDC recommended 16 doses of 4 vaccines (smallpox, DPT) between two months and age six.

1983: CDC recommended 23 doses of 7 vaccines (DPT, MMR, polio) between two months and age six.

2013: CDC recommended 50 doses of 14 vaccines between day of birth and age six and 69 doses of 16 vaccines between day of birth and age 18.

MULTIPLE VACCINATIONS GIVEN SIMULTANEOUSLY

In 1983, the CDC directed doctors to give a child no more than 4 vaccines (DPT, polio) simultaneously.

By 2013, the CDC directed that a child can receive 8 or more vaccines at once.

The Institute of Medicine published a report in 2013 stating that “key elements of the entire [CDC recommended childhood vaccine] schedule – the number, frequency, timing, order and age of administration of vaccines – **have not been systematically examined in research studies.**”

VACCINATIONS DURING PREGNANCY

A new CDC policy directs doctors to give pregnant women one dose of influenza vaccine in any trimester and one dose of pertussis containing Tdap vaccine after 20 weeks during every pregnancy. The Food and Drug Administration (FDA) has determined that large, well-controlled long term studies have not been conducted to confirm that influenza and Tdap vaccination during pregnancy is safe.

“The evidence strongly suggests that it is the vaccines and the vaccinated who are spreading the diseases for which vaccines are given.”

“The real issue is viral shedding. Viral vaccines are vaccines containing live viruses, even if they are weak or attenuated strains. These live viruses shed for varying amounts of time in the body fluids of a vaccinated individual – and can

be transmitted to others. You can absolutely catch the virus (or bacterium) from someone who has just been vaccinated against that disease. Not only that, but viral shedding from vaccines is leading to viral and bacterial mutations, helping to create a phenomenon of new and dangerous strains of disease which can evade treatment by becoming accustomed to whatever drugs get thrown at them."

"The U.S. has maintained one of the world's highest child vaccination rates and lowest infectious disease rates, even as public health officials have been unable to explain why so many of today's highly vaccinated children are so sick and disabled. Also unexplained, is why America has the worst infant mortality rate of all developed nations, with 6 out of 1,000 babies dying before their first birthday.

"Maternal mortality in the U.S. has also become one of the worst of all industrialized nations, with between 12 and 28 women in 100,000 dying within one year of giving birth, a maternal mortality rate that more than doubled between 1990 and 2013. According to the World Health Organization (WHO), annually an estimated 1,200 women in America suffer fatal complications during pregnancy and childbirth and another 60,000 suffer near-fatal complications.

"Women having babies in the U.S. today, who represent the most vaccinated generations in our nation's history, are now also being given influenza, diphtheria, pertussis and tetanus vaccines during pregnancy, a federal maternal vaccination policy that was launched in 1997 with administration of influenza vaccine during any trimester and was widened in 2011 with the addition of a pertussis containing Tdap shot after 20 weeks gestation.

"As of 2015, about half of the nation's pregnant women or nearly 2 million women, were either vaccinated with Tdap vaccine during pregnancy (42 percent) or influenza vaccine before or during pregnancy (50 percent) or received both vaccines." - Barbara Loe-Fischer, co-founder and president of the National Vaccine Information Center (NVIC)

What has happened to the health of children in America since the National Childhood Vaccine Injury Act was passed in 1986?

"After drug companies, pediatricians and all vaccine providers were shielded from accountability and liability for vaccine injuries and deaths, U.S. health officials tripled the numbers of vaccinations recommended for children - from 23 doses of seven vaccines in 1986 to 33 doses of nine vaccines by 1997, which has escalated to a current 69 doses of 16 vaccines. States also increased the numbers of vaccinations required for children to attend school and, by 1997, it was obvious that a growing number of highly vaccinated children in America were never well anymore.

"The new and unprecedented child chronic disease and disability epidemic that has perfectly coincided with the expansion of the child vaccine schedule over the past 30 years is having a devastating effect on children, their families and our nation. Today, 1 child in 6 in the U.S. is learning disabled; 1 in 9 has asthma; 1 in 10 has ADHD; 1 in 50 develops autism; and 1 in 400 has diabetes. Millions more are suffering with severe allergies epilepsy, anxiety and depression, and other kinds of brain and immune disorders marked by chronic inflammation in the body." - Barbara Loe-Fischer

"If we listen to present-day wisdom, we are all at risk of resurgent massive epidemics should the vaccination rate fall below 95%. Yet, we have all lived for

at least 30 to 40 years with 50% or less of the population having vaccine protection. That is, herd immunity has not existed in this country for many decades and no resurgent epidemics have occurred. Vaccine-induced herd immunity is a lie used to frighten doctors, public-health officials, other medical personnel, and the public into accepting vaccinations.” – Russell Blaylock, MD

“The live polio vaccine...contains live attenuated polioviruses. Those polioviruses, when you take that [live] vaccine, you shed them in your body fluids – your saliva, urine, and stool...Whether you have the a viral infection or you get the live attenuated vaccine, you shed live viruses in your body fluids and you are able to transmit the virus to other people who come in contact with your body fluids.” — Barbara Loe-Fisher

“Curbing civil liberties under the guise of protecting the public health and national security has become big business. In 1982, when the pharmaceutical industry threatened to stop producing government licensed and recommended vaccines for children unless vaccine manufacturers got a product liability shield, Congress gave Big Pharma most of what it wanted in the National Childhood Vaccine Injury Act of 1986. It was tort reform legislation sold to parents and the American public on the backs of children legally required by states to get federally recommended vaccines to attend school.

“Even though by Nov. 1, 2016, \$3.5 billion had been awarded to more than 3,500 vaccine victims through the federal vaccine injury compensation program (VICP) created under the 1986 law, two out of three claims have been denied throughout the entire history of the law’s implementation. Most of the compensation awards today are for adults injured by flu vaccine – not for children required to get vaccines to go to school.

“While the government denies compensation to many children, whose lives have been destroyed by state mandated vaccines, in the past five years liability-free drug companies have joined forces with politically powerful medical trade groups to change state vaccine laws. They are lobbying state legislatures to severely restrict the medical exemption and eliminate the non-medical religious, philosophical and conscientious belief exemptions for children attending school.” — Barbara Loe-Fisher

“...our current results are consistent with the existing evidence on the toxicology and pharmacokinetics of aluminum adjuvants which altogether strongly implicate these compounds as contributors to the rising prevalence of neurobehavioral disorders in children. Given that autism has devastating consequences in a life of a child, and that currently in the developed world over 1% of children suffer from some form of ASD, it would seem wise to make efforts towards reducing infant exposure to aluminum from vaccines.” — C A Shaw, PhD

“There is a serious problem with vaccine safety. Vaccine aluminum adjuvant has adverse neurological effects, at dosages that are recommended by the US CDC. Vaccine critics are supported by the science. Parents refusing to vaccinate according to the recommended CDC schedule are supported by the science. Use aluminum-containing vaccines with great caution, or not at all.” – C. A. Shaw, PhD

“Aluminum is an experimentally demonstrated neurotoxin and the most commonly used vaccine adjuvant...research clearly shows that aluminum adjuvants have a potential to induce serious immunological disorders in humans. In particular, aluminum in adjuvant form carries a risk for autoimmunity, long-term brain inflammation and associated neurological complications and may thus have profound and widespread adverse health consequences.” (From Tomljenovic and Shaw’s journal article “Aluminum Vaccine Adjuvants: Are They Safe?”, published in Curr Med

"The CDC says that 36,000 people die from the flu every year in the US. But actually, it's closer to 20. However, we can't admit that, because if we did, we'd be exposing our gigantic psyop. The whole campaign to scare people into getting a flu shot would have about the same effect as warning people to carry iron umbrellas, in case toasters fall out of upper-story windows...and, by the way, we'd all be put in prison for fraud." – Jon Rappoport

"A 2007 [Zika] outbreak on Yap Islands in Micronesia is estimated to have affected nearly 75% of the (island's) population of some 12,000 people, and a 2013 outbreak in French Polynesia affected nearly 28,000 of 270,000 residents. Neither epidemic caused a spike in microcephaly." — qz.com

"The correlation between a) the presence of Zika and b) babies with the microcephaly birth defect is so weak and sparse, it constitutes counter-evidence for Zika as the cause...the overwhelming majority of birth-defect cases show no presence of Zika. Therefore, the Zika-carrying mosquitoes have no business being the target of toxic spraying. But they are. And the spraying increases the risk of neurological damage in babies." – Jon Rappoport

"Microcephaly may result from any insult that disturbs early brain growth...Annually, approximately 25,000 infants in the United States will be diagnosed with microcephaly..." – From the Report of the Quality Standards Subcommittee of the American Academy of Neurology and the Practice Committee of the Child Neurology Society. (Neurology 2009 Sep 15; 73(11) 887-897)

"...even the ideal influenza vaccine, matched perfectly to circulating strains of wild influenza and capable of stopping all influenza viruses, can only deal with a small part of the 'flu' problem because most 'flu' appears to have nothing to do with influenza. Every year, hundreds of thousands of respiratory specimens are tested across the US. Of those tested, on average 16% are found to be influenza positive." – Dr Peter Doshi (from a British Medical Journal review article, "Influenza: marketing vaccines by marketing disease" 2013 (BMJ 2013; 346:f3037)

"...It's no wonder so many people feel that 'flu shots' don't work: for most flus, they can't, work because most diagnosed cases of the flu aren't the flu." – Jon Rappoport

"[According to CDC statistics], 'influenza and pneumonia' took 62,034 lives in 2001—61,777 of which were attributable to pneumonia and 257 to flu, and in only 18 cases was the flu virus positively identified." – Dr Peter Doshi, from in his 2005 BMJ report, titled, "Are US flu death figures more PR than science?" (BMJ 2005; 331:1412

"Between 1979 and 2001, [CDC] data showed an average of 1348 [flu] deaths per year (range 257 to 3006)." – Dr Peter Doshi

"Official data shows that large scale vaccination has failed to obtain any significant improvement of the diseases against which they were supposed to provide protection" — Dr Sabin, developer of Polio vaccine

"The greatest threat of childhood diseases lies in the dangerous and ineffectual efforts made to prevent them through mass immunisation.....There is no convincing scientific evidence that mass inoculations can be credited with eliminating any childhood disease." — Dr Robert Mendelsohn, MD

"The only safe vaccine is one that is never used." — Dr. James A. Shannon,

National Institutes of Health

"No batch of vaccine can be proved safe before it is given to children." – Dr Leonard Scheele, Surgeon General of the United States, addressing an AMA convention in 1955

"It is pathetic and ludicrous to say we ever vanquished smallpox with vaccines, when only 10% of the population was ever vaccinated." — Dr Glen Dettman

"The decline in infectious diseases in developed countries had nothing to do with vaccinations, but with the decline in poverty and hunger." — Dr Buchwald, MD

"There is a great deal of evidence to prove that immunisation of children does more harm than good." – Dr. J. Anthony Morris (formerly Chief Vaccine Control Officer at the US Federal Drug Admin.)

"There is insufficient evidence to support routine vaccination of healthy persons of any age." — Paul Frame, MD, Journal of Family Practice

"I think that no person would permit anybody to get close to them with an inoculation if they would really know how they are made, what they carry, what has been lied to them about and what the real percent of danger is of contracting such a disease which is minimal." — Dr Eva Snead

"The evidence for indicting immunisations for SIDS is circumstantial, but compelling. However, the keepers of the keys to medical-research funds are not interested in searching this very important lead to the cause of an ongoing, and possibly preventable, tragedy. Anything that implies that immunisations are not the greatest medical advance in the history of public health is ignored or ridiculed. Can you imagine the economic and political import of discovering that immunisations are killing thousands of babies?" — Dr William C. Douglass, MD (Honored twice as America's 'Doctor of the Year')

"Sudden Infant Death Syndrome has been reported following the administration of DPT. The significance is unclear. 85% of SIDS cases occur in the period 1 through 6 months of age, with the peak incidence at age 2 to 4 months." (From the accompanying insert to Connaught Labs' DPT vaccine) — Jane Orient, MD, executive director of the Association of American Physicians and Surgeons (AAPS)

"If you want the truth on vaccination you must go to those who are not making anything out of it...My aim has been to show that you have a powerful body to fight in the medical profession. We cannot be stirred without great effort. We are a kind of Juggernaut; we have to be dragged; we will not go. Let each one take his doctor, or, if he be so fortunate as not to need one, the doctor who lives nearest to him, and try and instruct him (about the dangers of vaccination). Send him the literature of the subject; he may not read it, but he may. Every little helps. – Instruct the people by means of public lectures and meetings. Show them as plainly as you can the uselessness and dangers of vaccination. Teach them that they must not go to the medical profession for counsel on the matter. If cases of small-pox were isolated and the clothes of the sufferers disinfected, the disease would not spread. If you wish to avoid smallpox, you must live pure and simple lives. If we crowd together we must expect disease; if we keep our skins closed, the impurities of the body are retained, and these impurities are the food upon which small-pox thrives. If your constitution is in a bad, state and you come in contact 'with small-pox, you will probably have it." — Dr T. R. Allinson

"The greatest threat of childhood diseases lies in the dangerous and ineffectual

efforts made to prevent them through mass immunisation...There is no convincing scientific evidence that mass inoculations can be credited with eliminating any childhood disease." — Dr Robert Mendelsohn, MD

"Vaccine-induced herd immunity is a lie used to frighten doctors, public-health officials, other medical personnel, and the public into accepting vaccinations."
– Russell Blaylock, MD

"the 271 vaccines in development span a wide array of diseases, and employ exciting new scientific strategies and technologies. These potential vaccines – all in human clinical trials or under review by the Food and Drug Administration (FDA) – include 137 for infectious diseases, 99 for cancer, 15 for allergies and 10 for neurological disorders." — PhRMA (the Pharmaceutical Research and Manufacturers of America), the pharmaceutical industry's trade association and powerful lobbying group

Dr Kohls is a retired physician from Duluth, MN, USA. He writes a weekly column for the Duluth Reader, the area's alternative newsweekly magazine. His columns deal with the dangers of American fascism, corporatism, militarism, racism, malnutrition, Big Pharma's psychiatric drugging and over-vaccination regimens, and other movements that threaten the environment, prosperity, democracy, civility and the health and longevity of the planet and the populace. Many of his columns are archived at
